## LOSS OF THE ARCTIC.

### Collision Between the Steamer and a Propeller off Cape Race.

### PROBABLE LOSS OF TWO TO THREE HUNDRED LIVES.

### ENTIRE DESTRUCTION OF THE ARCTIC.

### FIVE BOAT LOADS OF PASSENGERS MISSING.

### RESCUE OF THIRTY-TWO PERSONS.

### Arrival of Eighteen Survivors at this Port

### INTENSE SUFFERINGS AT SEA.

### NARRATIVES OF THE SURVIVORS.

### Capt. Luce of the Arctic, Mrs. E. K. Collins, Duc de Grammont, and others, Last.

### KNOTTY INTERESTING PARTICULARS.

The melancholy particulars of the loss of the Collins steamship ARCTIC were spread before our readers yesterday in an Extra Edition of the DAILY TIMES, and in a large part of our regular edition. The City was filled with mourning for the loss of so many valuable lives, and all classes of the community felt for the calamities of others as though they had been their own. We do not remember an occasion when sympathy so universal and unaffected has been bestowed upon the sufferers by a terrible catastrophe.

*Authentic details of the loss of the* ARCTIC were gathered yesterday by our Reporters and are this morning published in our columns at full length. The fatal encounter took place off Cape Race, at noon on the 27th September, when the ARCTIC, while running at full speed, came into collision with a first-class steam-propeller; and by the violence of the shock both vessels sprang a leak at the same moment. The propeller being built with water-tight compartments, is supposed to have escaped destruction. But not so the ARCTIC, which sank in a very short time, taking down with her the Captain of the vessel, LUCE, the wife and one child of E. K. COLLINS, Esq., proprietor of the line, the Duc DE GRAMMONT, EDWARD SANDFORD, Esq., a distinguished lawyer of this City, and, it is feared, Mr. GEO. F. ALLEN, Mr. WM. B. BROWN, and other prominent citizens of New-York. *Thirty-two* of the survivors were rescued by the *Huron*; and *eighteen* of this number were subsequently transferred to the bark *Lebanon*, and arrived at this port. Those who have reached the City are in as good health as can be expected, after the hardships they have endured; *two* only of their number having been compelled to undergo delay at Quarantine, and these by injuries and not in consequence of sickness.

The Telegraphic dispatches received from *Halifax report the arrival of a considerable* number of the survivors at that port, and hopes are held out that more lives have been saved than at first reported.

We give below the latest intelligence received from Halifax, with the detailed statements of the officers, passengers and crew of the ARCTIC. Everything pertaining to the history of the catastrophe will be read with absorbing interest:

HALIFAX, Wednesday Morning.

No intelligence has been received of the missing boats of the *Arctic*. In addition to the telegraphic *Acme Flour*, dispatched by Messrs. WARREN BROS., under an arrangement with the American Consul, and other vessels, we are happy to state that Rt. Rev. Dr. FULLER has placed his yacht *Hawk* at the disposal of Mr. NEWMAN, who lost no time in engaging a crew and fitting her out for sea.

She left at 1 o'clock P. M. yesterday with instructions to cruise for six days to the southward of the Island. It was generally expected that Mr. WHITE, of the New-York, Newfoundland and London Telegraph Company, would have dispatched the Company's steamer *Victoria* to cruise for the missing boats. The steamer arrived from the westward on Monday evening, and remained at the Company's wharf until yesterday, at noon.

We understand the reply to Mr. NEWMAN's application for her, was that she would be had for $300 per day. We believe her burden is about 300 tons.

The following statement of the loss of the *Arctic* by Mr. SAHLMAN, the Second Officer, appeared in an Extra of the *Ledger*, on Tuesday:

Mr. SAHLMAN and the other officers, crew and passengers, stated in the two boats, arrived at Round Cove, and reached here on Tuesday.

On Wednesday, 27th, at noon, Cape Race bearing N. W. 65 miles distant, while running in a very thick fog, we struck on the starboard bow, about fifty feet abaft the cutwater, by an iron steamer, which made three large holes in the ship,—two below the water, one of which was about five and a half feet in length and one or one and a half feet wide, leaving the whole cutwater and stem of the iron steamer clean through the *Arctic's* side.

So dense was the fog that the vessel could not be seen a quarter before the collision. The wheel was put hard to starboard, the engine stopped immediately, and backed at full speed until clear of the other steamer, which occupied a couple of minutes. The French steamer seemed to be sinking bow first. Captain LUCE immediately gave orders to shove away the quarter boats, which was done, and Mr. GOURLEY, Chief Officer, left the *Arctic*, in charge of the starboard boat.

On lowering the port boat, the Captain exclaimed, "Hoist up that boat again, Mr. SAHLMAN," and beckoned me to go to him. Upon doing so, he ordered me to go over the bow to ascertain, if possible, what damage had been done. I then found the holes above mentioned. Upon informing him of the facts, he gave orders to get sails up and try and get them round the bow, to endeavor to stop the leak, which was promptly done, but to no advantage whatever, so much of the bow and iron broken off from the other steamer projecting that the sails could not be brought close to the vessel's side.

The carpenter was then lowered down over the vessel's side, and pillows and mattresses passed down to him, to try if possible to force them in; but the leak was found to be so far below the water line that they could not be got in, and every exertion to stop the leak proved unavailing.

Capt. LUCE then ordered the ship's head to be kept for land, which bore N. W. by W. By this time we had lost sight of the Chief Officer's boat, and the other steamer, which we supposed had sunk.

We had not been on our course more than four or five minutes before she ran over a boat and crew belonging to the other vessel, all of whom perished, with the exception of one who caught hold of a rope hanging over the bow. Directly the boat was seen orders were given to stop the engine, which the Chief Engineer said could not be done, as the ship was fast sinking.

In about thirty minutes all the lower fires were out, and at least three feet of water in the ship fore and aft. By this time the confusion among the passengers was very great, but they used all efforts to assist the crew in keeping the deck pumps going, and in lightening the ship forward for the purpose of endeavoring to get at the leak from the inside, which was found to be useless—and numbers of them going into the boats which were still hanging to the davits.

In 45 minutes after the collision, I came up from the fore-hold and informed the Captain that the water was on a level with the lower deck beams, and that it was impossible to get at the leak. I then asked him what he thought would be the fate of the ship, when he stated his belief to me that there was no hope of saving her. He then told me to see to my boats. On going to those on the port side, I found them completely filled with men, women and children, and no possibility of getting near them. I immediately went to the starboard side and ordered two of the crew to lower the guard boat, and asked the Captain what were his intentions. *He replied that "the ship's fate should be his."* I then asked him if he would not allow his son to go, as I intended to take a boat, but he *returned me the answer, that "he should share his fate."*

*It was soon discovered* that there was no hope of saving the *Arctic*, and the lady, daughter and son of Mr. E. K. COLLINS, with several ladies, *were put on board a boat—in the act of lowering* which, one of the tackles gave way, and all except *one lady, who clung to a sailor holding fast to the* boat, were precipitated into the sea and lost. I *then jumped into a boat, and was ordered by the* Captain to cut away the tackle falls, and drop under the stern. I did so, and of the more than about 30 persons, I suppose, present overboard, of whom 19 or 20 were picked up.

We fell in with another boat which had been lowered from the other side, and lightened her of part of her complement, leaving 19 in her and 26 in my own boat.

The last sight we had of the ship, her guards were level with the water, and the surface of the sea was strewn with human beings who had jumped or fallen overboard, to whom, however, it was impossible to render any assistance, and we soon lost sight of all, as the fog continued to be very dense. I then asked the boat's crew whether they were *willing to be governed by me*, which was unanimously assented to, and I was put in complete command of both boats.

We were then about 60 miles S. E. of Cape Race. Deeming it my duty to take the nearest course, for the safety of all. After pulling for 40 hours, with nothing to guide us but the run of the sea, which I took to be heaving from the South-ward, and in a thick fog, which lasted all the time, we reached Broad Cove, some 12 miles North of Cape Race. We then proceeded by land to Renews, which we reached on Friday last. I there obtained, and took charge of a small schooner, which was hired by the Purser and myself, and proceeded immediately in search of the wreck or the boats.

We cruised round in a strong gale of wind from the Northeast, but discovered no trace of the ship or boats. I sent word to Capt. LEITCH, of the *City of Philadelphia* steamer, acquainting him with the catastrophe, and I am *informed* he sent off two vessels which he had employed about *his own ship. Mr. ALLAN GOODRIDGE of Renews*, also sent away a vessel on Saturday evening.

*It is* with the deepest regret that no trace of the *Arctic* or the boats could be found, but as there were many vessels in the neighborhood where the disaster occurred, *it is not at all* improbable that many lives may have been saved. No doubt, however, is left in my mind as to the total loss of the *Arctic*.

### LATER.

*By Telegraph from Boston.*

BOSTON, Wednesday, Oct. 11.

It is believed here that the *Arctic* came in collision with the propeller *Cleopatra*, which left Quebec September 24, for Liverpool, with the 70th Regiment of Highlanders, numbering about six hundred men, on board. No other vessel was known to probably being in the vicinity of Cape Race at the time.

It is also reported that a portion of the 54th Regiment of the line were on board—making altogether nearly seven hundred men.

ANOTHER DISPATCH.

We learn by telegraph from Halifax that some of the passengers saved from the *Arctic* went forward by the *Europe* from Halifax to Boston.

### Insurance.

We understand that the *Arctic* is insured for about $240,000 abroad, and $300,000 in offices and agencies here. *Her original cost was* $370,000.

### List of Passengers Saved.

Messrs. Ward, Depeyster, F. T. de Meyrs, W. A. Young, W. Gibes, Jr., W. W. Gibes, W. P. Rathbone, E. Hoover, J. Mulligan, W. Hennessy, J. McMath, *George Dowie, E. M. Jane, J. Egnet, C. Du Lassie.*

### *List of Crew Saved.*

John L. Crib, purser; Wm. Rankine, second mate; Mark Graham, fourth mate; John Duggan, first assistant engineer; David Reed, boatswain's mate, and the following seamen: Allen, Weeks, Lyle, Davis, Hendrickson, Tupper, Page, Jones, McGee, McRath, Blake, Jackson, Smith, Thomas, Fleming, Bailey, Carpenter, *Firemen*—Messrs. Cannon, Egan, Larkin, Mabie, Mercer; Hardwick, a bedroom servant, and Waddington, East and Baker, waiters. (Signed,)

WM. SAAHLAW, Second Officer, *Arctic*.

## SEVENTY-FIVE PERSONS SWEPT OFF A RAFT.

### Statement of the Sole Survivor, Peter McCabe

We had a long interview yesterday, at the Seamen's Retreat, on Staten Island, with the young man, PETER MCCABE, who is the sole survivor out of *seventy-six persons*, who took refuge upon the raft which was formed from the spars of the *Arctic*. The case of this man is mentioned in the statement of GEORGE H. BURNS, which we published in an Extra Edition of the DAILY TIMES yesterday morning. MCCABE clung to the raft for a period of *twenty-six hours* before he was relieved; and when finally discovered was so nearly exhausted that he was on the point of dropping into the sea to put an end to his sufferings. He was engaged on board the *Arctic* as waiter in the second cabin, and gives a very clear statement of the terrible events of the day.

MCCABE is suffering from a severe wound in the left leg. His foot was caught by a cask while upon the raft, and so badly crushed that surgical aid became necessary. Upon his arrival at Quarantine on Tuesday night, he was duly cared for, and at an early hour yesterday morning, was removed to the Hospital wards in the Seamen's Retreat, near Vanderbilt Landing, where he now lies under medical care.

We give his statement in full, and nearly in his own words:

STATEMENT.

I was engaged on board the *Arctic* as a waiter in the second cabin. I am a native of Dublin; 24 years of age; have lived in Liverpool for the last seven or eight years, and shipped on board the *Arctic* on her last trip out from Liverpool. It was my first voyage across the Atlantic.

At the time of the collision, on the 27th of September, I was coming up out of the second cabin, bringing glasses for the table. We usually set the first table at 12 o'clock, and dinner was served in the second cabin from 12 to 1 o'clock. I had been engaged in laying the table. The collision occurred as I was ascending the stairs, and I think it was exactly at noon. The shock was very slight on board the *Arctic* when the vessels met; but it was sufficient to indicate that a serious accident had taken place. I immediately went upon deck, and the first thing I saw was a propeller heating along on the starboard side of the *Arctic*. After a few minutes had passed, the propeller again came around, on the same side. I saw her twice, and at both times she passed on the starboard side of our ship. The second time she passed, I pulled in a man who was trying to get out of the propeller, and presently saw four men fall from the propeller under the paddle-wheels of the *Arctic*. They could not be rescued, and were never heard of afterwards. During all this time the fog was so thick that we could not see half the vessel's length from the bows of the *Arctic*.

As the propeller came in sight the second time, I saw that her decks were crowded with passengers. I did not observe any soldiers among them, and the time was so short that it would have been impossible to distinguish any person through the fog. The first time the propeller appeared in sight, there was no sound of voices on board; but when she came into view again several persons were heard upon her decks shouting loudly. Several large holes were made by the propeller in the starboard bow of the *Arctic*, and the side of the ship was ripped open, so that the water came in freely and covered the bed-plates of the engines. *One of the firemen told me, afterwards, that the* water began to come in the instant after the collision took place. *In about an hour the water* reached the boilers and extinguished the fires.

As nearly as I could ascertain, the *Arctic* cut the propeller down from the cutwater on the starboard side. I do not think, however, that the propeller *sunk, for those craft are usually made with water-*tight bulkheads, so that they would float. At the time of the collision, I should think the *Arctic* was running at the rate of twelve or thirteen knots an hour, *and the propeller was also going very* rapidly. If the *Arctic* was running at thirteen knots, the other vessel must have been making fifteen knots, for the wind was in her favor, and all her sails were set, while we were running against a head-wind.

When it was found that the *Arctic* was leaking, all hands went to work to get out the boats and construct a raft. Our passengers remained perfectly calm during the whole of the scene. Many of them had gone upon deck, while we were laying the tables in the cabins, but some remained below; all preserved excellent order, and assisted in the preparations for security. Both crew and passengers *immediately manned the pumps, and continued to* ply them vigorously until the water reached the *second cabin, when further labor at the pumps be*came useless, and all hands desisted.

We then got axes, and went to work to cut down the two fore-yard-arms of the ship. One yard was launched at a time, and the two were fastened together in the water, for the purpose of forming a raft. After this was done, the firemen lashed three or four water-casks together, and it was hoped that when this work was completed, the casks could be floated off the deck, but unfortunately they capsized. The water was now on the main deck, and several persons were floating about on doors and beds. Two men were overturned under the water-casks, but they afterwards got up, and I ran with them to the saloon-deck. We had but just reached there when the water came up to that deck also, and I was almost immediately covered by it. I seized hold of a door which had been taken down to save passengers, and went into the sea, where I left the door, and got upon the raft, which had *been partially constructed from the spars we took* from the vessel.

*A great many persons were trying to get on the* raft. Some were clinging to it with one hand, and, although it was already crowded, others were striving to get a foothold. Among the number who were upon it, I saw four ladies. Their names I did not know. Altogether, there were *seventy-six persons* on the raft. It was hard work *to secure ourselves to the raft, for it shifted* rapidly and turned completely around for three or *four times. All those who took refuge upon it* were washed off, or died by 8½ o'clock that evening, *and I was left alone.* At a few minutes before the last man went, I asked him the time. He told me, and *died in five minutes afterwards.*

All that night (Wednesday, 27th,) I hung to the raft, and all the next day till 6 o'clock in the evening. Just at dusk on Thursday, (28th,) I espied a sail in the offing, and commenced shouting as loudly as I could, to secure attention. Happily, they saw me, and immediately bore down to my rescue. Had relief been delayed for a few minutes longer, I should not have been here to tell the tale. I was completely exhausted by 60 hours of exposure and hardship, and had lost all hope, so that I was on the point of relinquishing my grasp, and dropping into the sea. I had got my foot jammed between two casks, and was compelled to remain on my hands and knees. Mr. DORIAN, the third officer of the *Arctic*, was the one who came to my assistance, with a boat manned by the crew of the *Huron*, the vessel that I saw. On our way to the *Huron*, we passed the life-car of the *Arctic*, but I did not notice it particularly. On board the *Huron* I found 32 persons from the *Arctic*, who had been rescued, as it afterwards appeared, from the death boat that was launched. I knew nothing of *these people till I saw them on board the Huron.*

Of our treatment on board the Huron, I desire to speak in the warmest terms. The sufferers were all received with the utmost kindness; dry clothes were furnished us; and every attention was paid to our comforts. The *Huron* was bound to Quebec. We remained on board of her a day and a night, and on Saturday were spoken by the bark *Lebanon*, bound to New-York. It was deemed best that a portion of the *Arctic's* people should be transferred to this vessel, and eighteen of us were accordingly transferred. The remainder of the company went on to Quebec in the *Huron*. The reception we met on the *Lebanon* was as cordial as on the other vessel. We remained on board until Monday last, when we spoke the pilot-boat *Christian Berg*, one hundred and seventy miles from New-York, and were all transferred to her. We reached Quarantine at 10 o'clock on Tuesday night.

(Signed) PETER MCCABE.

STATEN ISLAND, Oct. 11, 1854.

### Statement of Mr. Francis Dorian, Third Officer of the Arctic.

The first I heard was the cry, "Hard a-starboard!" I then understood that there was something wrong. I went on deck and found the vessels about seven yards apart. I stood watching the *Arctic*, in the full expectation that she should yield to her helm. The other vessel struck her abreast the mizzenmast. Captain LUCE gave orders to clear away the boats. Mr. GOURLIE cleared away his boats and lowered them down before I thought there was anything wrong with the ship. By the time we had all the boats ready, Captain LUCE gave orders to hoist them and allow no one to enter them. During this time the captain, carpenter, and several of the passengers were outside, trying to stanch the leak inside and out. At the same time water casks were being filled and every exertion was used to cause the vessel to raise forward; yield the starboard chain overboard to lighten her.

The Second Officer came on deck, I asked if he was making any exertion to stop these leaks; he replied, yes; I asked him what was the prospect. All the answer I got from him was to hurry up those pumps, that to the main pumps and those on the saloon gangway; I went along the deck and found two of the quartermasters standing by the port afterward quarter boats; I ordered them, by command of Capt. L., to take some weapons and defend it. While I stood off, I saw the passengers and crew filling the port forward boat; I came along for the purpose of putting a stop to it, and found Capt. LUCE in the guards passing ladies and children into the boat. Several gentlemen were also passed in. I think about 20 were in it. He He gave the orders to lower away, I turned around and saw the after boat perfectly crowded. By the time I got aft they were in the boat, and had the bow fall partly lower, and from the davits, and held on by the after pall, when she tipped over and emptied all out with the exception of three. With the assistance of Capt. LUCE, Capt. GRAMS, one of the firemen and myself, we got the quarter-master to go down and pass the painter up, and by hauling on to it as the ship lurched, we succeeded in saving the boat, and hauled her on to the afterguards, the engine turning ahead slowly at the time. I took a turn of the painter round the afterguard with the intention of keeping the boat there as a last resource. Some passengers, part of the crew and firemen precipitated themselves right into the boat—at least twenty. They cut the boat adrift and went away; that was the last of that boat I saw. There was one quarter-master in her, I walked off the guards on the upper deck, and the passengers proposed to me to form a raft of such materials as I could find on board, and wished me to take charge of the ship. I answered that Capt. LUCE was on board, such was his place as long as the ship was above water. He was *quite cool but had lost a good deal of his command* of speech. At the same time I found with the exception of him that I was the only officer on board. When I reported to Capt. LUCE that all connected with the sailing department had left he gave a sort *of despairing exclamation*, and then with his sanction the passengers and myself proceeded to get our spars overboard to form a raft, main yard, main *topgallant-yard, main topsail-yard* had several smaller spars. While this was being done the *remaining engineers took the other boat*, as I understood, to endeavor to stop the leaks. I saw *them in the distance when the ship went down.* With the consent of Captain LUCE we launched our remaining boat to form a raft. For the boats protection we took the oars out, so that those aboard would not rush into and swamp her. Mr. BURNS of Adams & Co's Express, Mr. THOMPSON of New-Orleans, Capt. GRAMS of New-York City, Mr. IRBINS of California, and Mr. ——, and one or two firemen, among whom was THOMAS BRENNAN of the Island of Scilly and myself, labored diligently till we got all secured, which at the time was floating within our reach. I ordered the boat to be taken along, outside the raft, so as to secure everything that was on the surface, such as water casks, sofas, &c. By the time I had got the boat on the outside of the raft, a perfect mania seemed to seize all on board and a universal rush was *made for the boat*, so that no possible entreaty or threat could stop it. The boat was *perfectly* crowded, and in order to save it from being swamped I ordered the painter to be cut and shoved clear of the raft, when I went about half a boats length from the raft, they were seizing everything afloat to endeavor to reach the boat, I ordered the people in the boat to make every effort to keep her from drifting off, at the same time I hailed Capt. LUCE, "for God sake" to take the people from the raft, in order that I might go to work on it and lash everything that was buoyant to it. To the best of my knowledge about three minutes afterward the *Arctic* seemed to settle down, stern foremost. The last I saw of Capt. LUCE, he was standing at the after part of the starboard paddle box. In the boat there were several conjectures, some exclaiming, there is the Capt., but to the best of my knowledge he was nowhere to be seen when the ship went down.

According to the descriptions I got of Mrs. COLLINS and family, (as I did not know them personally,) I believe she was not in the boat that was tilted over. I made the remark to Mr. BURNS that perhaps Mrs. C. had gone in some of the boats that had left the ship. He replied, the last thing he did on board was to fasten a *life-preserver* around Mrs. C.

From this juncture till our arrival in the City, I entirely endorse the statement given by Mr. BURNS in yesterday's TIMES.

The propeller was above water when last I saw her, with about two hundred persons crowded on the poop. The boat in which were the Chief Engineer and his assistants was the only boat that knew the fate of the *Arctic*.

FRANCIS DORIAN.

NEW-YORK, Oct. 11, 1854.

Mr. DORIAN was on board the *Lanark*, of Liverpool, nine years and seven days ago, when he was picked up one hundred and fifty miles east of where he was picked up on the 27th ult.

Mr. D. landed in New-York without a cent in his pocket or a shirt to his back.

### Statement of Thomas Stinson, Officers' Steward.

Mr. THOMAS STINSON, Officers' Steward on board the *Arctic*, is now lying at the Seamen's Retreat, laboring under a dislocation of the shoulder. He is brother-in-law of MCCABE, and imparted the following information to our reporters:

STATEMENT.

After the vessels struck, I got into one of the quarter life-boats. One end of this boat was partially unfastened, while the other end remained attached to the davits. There were about twenty persons in the boat. The temporary fastening gave way, and all were precipitated into the water, with the exception of myself and another. I believe that they all perished; the only parties I could recognize was *Captain E. Pratt* and lady, of New-York. This was on the starboard quarter aft. The fastenings by which the boat hung on were by the *fore-derrick chains*, the *stern* being unfastened, and the steamer going at the rate of thirteen knots, making for land.

When the boat was capsized, I found that my arm entangled in some of the gear, and the weight of the body was entirely suspended by it. To this I attribute my preservation. I was rescued by some of the sailors, and dragged on board the ship, where a bed was provided for me on the forward deck. I lay down, and made up my mind with MCCABE that we would die together on board the ship.

I went immediately to the engine-room and found it fast filling; changed my mind, and determined to make another struggle for life, and slung myself by a rope from the starboard-quarter and got into the water and swam until the injured hand got stiff, raised the usual greetings which were floating near. From these I was assisted into the last boat which was launched. From 14 to 16 persons were in the boat when I got in, and about 14 more got in afterwards,—making, in all, 32 persons when I left the *Arctic*.

The ship filled and sank in about five minutes from the time the painter was cut, which was done by Mr. DORIAN's orders; otherwise the boat and all that were in her would have perished, as she would have been crowded to such an extent as to sink her.

An immense crowd of persons collected on the quarter-deck, but they remained perfectly still till the water reached the guards, when a universal shriek was raised. I noticed Capt. LUCE, Mrs. E. K. COLLINS, son and daughter, and Dr. TAYLOR, the ship's surgeon.

The boat in which we were, beat about the wreck during the night, under the direction of Mr. DORIAN and Capt. PAUL F. GRAMS, of New-York, who kept watch and watch during the night. During the evening and night, several bodies were seen floating about. The head stewardess was particularly recognized, by her dress. The weather was exceedingly foggy, and the cold penetrating. There was no provision on board except one head of cabbage and a few raw pumpkins, picked up during the night. The weather cleared up about 3 o'clock, and at about 4 A. M. we sighted the bark *Huron*, of St. Andrews, N. B., bound for Quebec. Those who were able made oars out of pieces of wood fastened to handspikes, and made efforts to reach the bark, which they succeeded in doing about 8 P. M. We were received with great kindness on board this vessel, and also on board the *Lebanon*, to which we were afterwards transferred.

(Signed) THOMAS STINSON.

STATEN ISLAND, Oct. 11, 1854.

### Statement of Mr. Brennan.

At the time the collision took place I was on the upper gallery in the Engine-room, standing by the side of Mr. ROGERS, the Chief Engineer. It had just struck eight bells. Immediately after the shock of the collision, the bell struck once as a signal to stop the engine. Mr. ROGERS then asked hurriedly, "What's up now?" He immediately rang out to the Engineer on watch to unhook her in order to stop the engines. The order was immediately complied with; but soon after he gave an order to go ahead, and immediately went down into the store-room, and with Mr. DIGNON, the First Assistant Engineer, got a wrench and opened the bilge-injection, and gave orders for all of the pumps to be set at work, as he saw the water rising in the engine-room. Mr. ROGERS then went on deck, I believe to consult with the Captain. What passed between them I have no knowledge of. During his absence, of about ten or fifteen minutes, the water had risen very rapidly in the engine-room, and on his return he ordered all hands down to get up coals in order to keep the fires lighted as long as possible. The water came in so rapidly, however, that the work of handing up coal was discontinued, and the engines were finally stopped, owing to the water having risen to a level with the fire. The water came from forward. When we could no longer induce steam without the men *being in danger of being drowned below, we came* on deck and manned the pumps there. The two small donkey-pumps were still working, and continued to work, some ten or fifteen minutes after *we got on deck, until the steam was exhausted in* the boilers.

### Statement of Mr. James Carnegan.

Mr. JAMES CARNEGAN, who, with his brother, *Dorrin, came to this port by the pilot-boat Christian Berg*, yesterday morning, has furnished us with the following statement:

STATEMENT.

"The *Arctic* left Liverpool on the 20th of September. The ship proceeded at the rate of thirteen miles an hour for seven days. On the night of the 27th, about midnight, eight bells having just been struck, the weather being very thick at the time, the vessel came into collision with a vessel steering northeast. The *Arctic* was first struck within *two feet of the stern-quarter*, and the second time near the guards. The vessel which came in collision with the *Arctic* was then aft the starboard side. Capt. LUCE instantly commanded the *Arctic* to be backed, which she did for 10 minutes; the propeller then came off the starboard side round to the larboard quarter; she then steered off and was lost entirely out of sight; at this time, a boat came round from the propeller on the *Arctic's* larboard side, the boat coming under the wheel was struck by it, and every soul on board the boat perished except a Frenchman who climbed up on the *Arctic's* sides—he was drowned, however, when the *Arctic* finally sank. After the ship struck, Mr. GOURLAY, the First Officer, was sent in a boat with three sailors to ascertain what damage the steamship had sustained; after a while Mr. GOURLAY pulled again towards the ship but the Captain trying to make Cape Race, and going at the rate of fifteen miles an hour, Capt. LUCE motioned him to keep off, and he and his boat were soon lost sight of. The water now washed in rapidly from the starboard side and both the upper and lower rows of fires were totally extinguished. The engineers had left the engine room an hour before, but the firemen bravely remained at their post, doing the utmost toward saving the ship though standing up to their waists in water. Mr. CARNEGAN all along had worked at the pumps and the constructing of a raft till within 10 minutes of leaving the vessel. Seeing that all the boats but one had left he determined now to look after his own safety, and with his brother DORRIN went into the last boat commanded by Mr. DORIAN; the officers and crew of the *Arctic*, Mr. C. states, did not do their best toward saving the vessel, leaving it too early. The women however exhibited a good deal of energy, working continually at the pumps with the aid of a few of the passengers. Five minutes after leaving the vessel the *Arctic* went down. Mr. C. stood all the time on the guards of the boat, seeing the vessel go down. The people on board the *Arctic* did not seem to be aware how close they were standing on the doors to eternity, and no cries or yells were heard. 10 minutes after the ship went down the boat pulled to the place where the ill-fated vessel had gone down; nothing, however, was encountered but the bodies of several ladies with life-preservers on; among them that of one of the colored stewardesses. Being without oars, they picked up a spar which they fastened to the boat, and rode time in a rough sea till 10 o'clock the next morning. Mr. C. suggested then to cut some pieces of wood on board the boat into oar-blades, and thus try to reach the shore. The spar suggested was also put into two parts, and this gave them four sweeps; they pulled then for the shore for two hours; a vessel now hoving in sight, they changed their course and pulled towards her. They reached her about 6 o'clock P. M. on the 28th, having been fourteen hours out. *She proved to be the bark Huron*, Capt. WALKER, of St. Andrews, bound for Quebec. Mr. CARNEGAN speaks in the highest terms of Capt. WALKER, who, like Capt. CRICHTON, of *San Francisco* celebrity, is a Scotchman, and was, like him, short of provisions and water, having been twenty days out from Bristol. The Captain received and treated the shipwrecked with the utmost kindness, furnishing a great part of them with clothes. His men, likewise, did their best to make their lot as easy as possible. On the 29th, they fell in with the *Lebanon*, Capt. STURRET, from Providence, Wales, bound to New-York. Eighteen then left the *Huron*, Mr. C. and his brother among the number, while fourteen remained on board. On the *Lebanon* they met the same kind treatment as on the *Huron*, and remained on her till they were

*Continued from the Extra Edition of the Daily Times.*

### Statement of Mr. Thompson.

From the statement of Mr. THOMPSON, who arrived in the *Lebanon*, it seems quite probable that the number saved may be greater than originally. Six boats left the *Arctic*, and there is good reason to hope that some of them reached places or were picked up, besides the one containing him. The lifeboats would contain about 150 persons, and many of this number, it is hoped, may have been saved.

Mr. THOMPSON thinks the steamer with which the *Arctic* came in collision was a Quebec steamer, bound for Liverpool, and that she did not go down. It is further possible that many of the persons who got upon the raft were taken aboard of her, and may have been saved. The boat which contained the engineers left the *Arctic* at an early stage, and as they had only about forty miles to make, it was quite probable they reached the shore.

### The Duc de Grammont.

Among the many whose untimely and lamentable end is calculated to excite a feeling of universal sorrow, is the Duc de GRAMMONT, a young French nobleman of distinguished family, who was dispatched to this country as an attaché to the French embassy at Washington. In his death there seems to have been a sort of determined fate. More than six months ago, he was appointed to the post which he was on his way to fill. His departure was repeatedly postponed by family circumstances and other obstacles, and it was only by the greatest exertion, and after all expectation of his being able to leave by the *Arctic* had failed, that effort, as it was thought, took a more favorable turn, and he finally were enabled to bear him off. He was but twenty-one years of age, and, so far as we have been able to ascertain, of exceedingly amiable manners and intelligent mind. His ancestry has occupied a prominent place both in the political and literary history of France.

His predecessors by the female side were of Irish origin. The first person bearing the title whose name figures in the annals of the French nobility is the Count PHILIBERT DE GRAMMONT, who appears to have belonged originally to Navarre. He was the most celebrated wit of his time, and was connected with some of the first families that composed the court of LOUIS QUATORZE. He was the son of ANTHONY, Duke of Grammont, and nearly related to Cardinal ROCHELIEU. It is supposed by some that he visited the electrical profession with the military, but the opinion rests on more conjecture, and has no stronger grounds than the fact that such an dangerous union of vocations was not unknown in his time. He served with éclat in the army under CONDE and TURENNE, and was present at the siege of TRIER. An interesting episode is related of him, but for the absolute accuracy of which we cannot undertake to vouch. It is told of him that he commanded at the siege of a certain place, and obtained an easy capitulation. The governor in delivering the keys of the city to the victorious general, said to him: "Monsieur, I'll tell you a secret; the reason of my capitulation was because I was in want of powder." "Monsieur," replied Dr. GRAMMONT, "A secret for a secret; the reason for my giving you such an easy capitulation was because I was in want of ball." Dr. GRAMMONT went over to England in the early part of the reign of CHARLES the Second. There is no doubt that he enjoyed himself to the extent of his bent at the Court of the dissolute monarch. The most serious of his adventures was that with the lady HAMILTON, one of the most beautiful as well as one of the most reputable women who graced the ranks of the English aristocracy at the time. Her father, Sir GEO. HAMILTON, a younger son of the Earl of ANNANDALE, was a Scotch nobleman; her mother was a daughter of Lord TEVIOTDALE, and sister of JAMES, the first Earl of ORMOND. She was born in Ireland, and brought over to England by her uncle the Duchess of ORMOND. Biographies of the time give some particulars of the courtship between her and Dr GRAMMONT, which are rather amusing. The Count was exceedingly warm in his protestations, which the lady, it would appear, took more seriously than they were intended. Dr GRAMMONT left London without bringing matters to the expected issue, and the young lady's brothers, incensed at the supposed slight, pursued him, and overtook him near Dover. When they got within call, they shouted out, "Dr GRAMMONT, have you forgotten nothing at London?" "Because nay," he replied, with the utmost coolness, "I forgot to marry your sister; so lead on, and let us finish the affair!" They all returned on the most amicable terms, and Dr GRAMMONT made Miss HAMILTON his wife.

Miss HAMILTON's brother (ANTHONY) was also one of the most celebrated and clever characters of the period. He was born in Roscrea, County of Tipperary, Ireland, about the year 1646. His father—Sir GEORGE—was at one time the Irish Receiver-General; but, in consequence of reverses in his position, brought about by political changes, he retired with his whole family to Normandy, in the Spring of 1663, and remained there in great poverty for several years, until the Marchioness of ORMOND obtained from CHARLES, who always exhibited the greatest apparent respect for her, the liberty of raising £2,000 a year from her own and her husband's different Irish estates. ANTHONY HAMILTON was brought up in the Roman Catholic religion, and adhered conscientiously to it through life. At an early age he entered into the army of LOUIS XIV., and rapidly rose in his profession.

He returned to Ireland, and resided there and in England for a time during the reign of CHARLES the Second. In the reign of JAMES the Second, when the Catholics were admitted to authority, he entered into the Irish army, and in 1686 we find him ranked as Lieutenant-Colonel in the regiment of Sir THOMAS NEWCOMBE. HENRY, Earl of Clarendon, son of the famous Lord Chancellor, was then Lord Lieutenant of Ireland, and although warmly prejudiced against Roman Catholics, he held ANTHONY in the highest estimation, and by his recommendation got him appointed a privy counsellor, with a pension on the Irish establishment of £200 a year. Subsequently ANTHONY was appointed Governor of Limerick, but after the total overthrow of JAMES by the Dutch and English troops under WILLIAM the Third, HAMILTON returned to France.

He took up his residence at St. Germains, and devoted himself to letters, in consequence of which he soon acquired the reputation (and it was deserved) of being a man of elegant taste and brilliant literary acquirements. He wrote the Fairy Tales, a most delightful supplement on the chaste fictions then in vogue, and after works, about the year 1774, he turned his attention to collecting the memoirs of his brother-in-law, the Duc de GRAMMONT. There can be little doubt that Dr GRAMMONT distorted much of the materials of this work, but a great deal of the chaste displayed by the volume is attributable due to HAMILTON. GRAMMONT was HAMILTON's senior by at least twenty years, and, therefore, we could hardly be justified in attributing the elegance, vivacity, and epithet of style which this work displays, to a man so old as Dr GRAMMONT must have been. It is said that Dr GRAMMONT himself sold the manuscript to a publisher for fifteen hundred livres. When it was brought to PORTSMOUTH, the owner of the press at that day, he refused to license it on the score of its indecency. HAMILTON was indicted in the court's vacation, and complained to the Chancellor, who compelled PORTSMOUTH to grant the license. GUINOT has said of these memoirs that they are "a volcanic work, the delight of every man and woman of taste," and Lord CHESTERFIELD said of their author, that he was "superior to the indolency of the Court" whose history he gave. The book is unquestionably based in many of its descriptions, but it is valuable as a historical, and in all intents and purposes, a faithful representation of the characteristics of the English Court during the profligate reign of the second CHARLES. As

[illegible] the Duke of Guiche and the Countess Tanneguy Leclerc and Sebastiani. The Duke de Guiche [illegible] to Windsor. He bore the reputation which was in keeping with his family antecedents, of being a bon vivant of the first water. We are not aware that he has otherwise highly distinguished himself. The young man who was with us and a fair is supposed to be a nephew of the ex-Duke's ambassador. There are now two branches of the family, that to which the deceased belonged being known as the Ex Gyneumont branches. We have been informed that it was the last of his race. The present Countess of Gramont, who we presume is his mother, is sister to Count D'Orsay. Our information as to his immediate relatives, however, is somewhat vague; hardly two of the sources from which we have derived our information agree. We believe, however, that the preceding summary of his family history is at the most perfectly reliable.

### Biographical Sketch of Edward Sandford, Esq.

Edward Sandford, Esq., whose name appears among the melancholy list of those lost in the recent disaster of the *Arctic*, was a leading member of the Bar of this City. Sudden and calamitous as is the loss of human life which it has thus been our painful duty to record—deeply painful as the sad bereavement will come home to many hearts and homes, we cannot limit the mention of such a name as Edward Sandford to the hasty and necessarily brief newspaper record of such calamity.

It is not two years since we were called to notice the death of his learned and eminent brother, the late Judge Lewis Sandford. The legal profession then lost one of its brightest ornaments, but it was in great not unlooked for. Insidious disease had long threatened its victim. He was calm and waiting and prepared. Not so the brother—almost without a moment's warning, he is summoned, and in the enjoyment of fullest health, occupying a prominent position in his profession, and in the midst of a course of upright usefulness.

A few leading facts of his biography we present, our readers an not devoid of interest at this time.

Edward Sandford, was born at Ovid, Seneca County, about the year 1806. His father Dr. Java Sandford, was a physician of high prominence. He came from Southampton, Long Island. His mother was descended from Thomas Halsey, and one of the grantees of the Halsey lands in Southampton. She was a woman of highly cultivated mind, and to her assiduous care the subsequent height attained by her two illustrious sons are mainly owing. The father died in 1817. The mother subsequently married Dr. Eastman, of Ovid, a physician of high standing and usefulness. Here, the subject of this sketch enjoyed the advantages of ordinary common school education till he was nine years of age. The family then moved to Skaneateles. Young Edward remained here with his family till his fifteenth year, when he went to Cheltenham and entered the Polytechnic School of that place, then under the charge of Dr. Yates. He gave no special promise while here. He was only known as a diligent student. His original design, it appears, was to prepare himself for the mercantile business. It seems he abandoned this idea, for he immediately upon leaving school entered upon the study of Law at Skaneateles. He studied in the office of Daniel Kellogg and his brother Lewis, who was the associate with Kellogg. After completing his studies he came to New-York in 1823. He went into partnership with John L. Graham, late Postmaster.

Shortly after commencing the practice of the law he became an active Democratic politician. In 1828 he became disgusted with the Democratic party and joined the Conservatives. He then turned against Van Buren, whose claims for the Presidency he had previously urged with great influence and influence. About this time he dissolved partnership with John L. Graham, and took to copartnery James Lorenzo Graham and Judge Hoffman of the present Superior Court. In 1832, after Hoffman received the appointment of Vice Chancellor he left the firm. Edward's brother, Lewis, during this year came from Schenectady to New-York, and the two brothers formed a law partnership. Edward gave his attention almost exclusively to the common law business, his brother attending to matters of equity. Some changes occurred from time to time in the law firm. Lewis left when appointed Vice Chancellor, and Hoffman retired. Judge Bosworth, of the present Superior Court, subsequently became partner. The firm when Sandford last went abroad stood, Sandford, Bosworth, Perkins and Strong.

Mr. Sandford has been to Europe twice previous to his last untimely journey thither. His wife and family are now in Paris. He had taken them there to give his daughters the advantages of Parisian education and society. His last occasion of going there was to improve the law vacation in visiting them, hoping by absence from business and travel to recruit his health and return to his labors with renewed vigor and hope.

It might be mentioned incidentally that in 1837 and 1839 Mr. Sandford caught the contagion of speculation, and was led to invest his property in lands of the dearest and hazardous speculation, then prominently rife. The result was, he became bankrupt. He has since liquidated every incumbrance. He did not despair, but went diligently to work, and now leaves the product of these years of toil a property of seventy-five thousand dollars and over.

One of the striking features of Mr. Sandford's character was its fact his indomitable industry. He worked early and late. As a lawyer, he showed great research. As a bar lawyer and jury lawyer he stood alone equal. His mind was closely logical, and yet showing great fertility and invention. He was scrupulously faithful to his client. He was a generous, good companion, utterly free from the jealousies which members of the bar often feel and exhibit towards one another. He was kind to juniors in the profession, and popular in consequence. Strict and communicative.

### The Scene at the Office of E. K. Collins & Co.

At 10 which our reporter visited the office of Messrs. E. K. Collins & Co., No. 56 Wall-street. He found it filled by a large number of our citizens, many of them men of importance in their respective callings, besides a fair representation from other parts of the Union. Two of the surviving sons of Mr. Cheever were present. In one corner of the apartment behind the railing a stalwart group was observed around a gray headed man of about 70 years of age, who, though naturally hardy and vigorous, bore evident marks of excessive fatigue in his pale, worn look. This man was Thomas Bennett, an officer in the engineering department of the Army, and one of the few fortunate survivors of the sad catastrophe. A deep feeling of sympathy seemed to pervade the minds of all present, and many questions were propounded to Mr. Bennett in rapid succession. Some described the personal appearance of absent ones inquired for them by affinities and deep friendship, some by the ties of consanguinity, and others bound by business and association, and inquired if he had seen them enter any of the boats which left the vessel previous to the last one, on which he was saved. His words were anxiously waited for, and in some instances they were sufficient to buoy up an expiring hope, but in others to lead them to despair of ever meeting the loved ones again on earth. At brief intervals, the announcement of another arrival of an eyewitness of the telegraphic signal spread fresh anxiety, and they all rushed to the door to hear the tidings. Some were gladdened by a happy meeting

# FOUR DAYS LATER FROM EUROPE.

## ARRIVAL OF THE UNION.

## DETAILS OF THE CRIMEAN EXPEDITION.

### THE ALLIED FLEET REPORTED.

## MOVEMENTS OF THE RUSSIANS,

### INTENTIONS IN THE BALTIC.

## EGYPT SENDING TROOPS.

### The Markets, Exchange, &c.

By the arrival Wednesday morning of the United States Mail steamship *Union*, Capt. ADAMS, we have dates from London, Southampton and Havre to the 27th ult.

The *Union* left Havre at noon, and Southampton at 6 P. M. of the 27th.

The United States Mail steamer *Washington* touched at Southampton in her way to Bremen on the 23d ult. The *Europe* reached Liverpool the same day.

The United States steam frigate *San Jacinto*, Capt. STRINGHAM, sailed from Southampton for the Baltic on the 27th ult. The Mayor of Southampton paid an official visit to this fine ship the previous day.

The British screw steamship *Indiana* (CROSKEY & CORNER,) was loading at Havre for New-York, and was to leave that place on the 3d and Southampton on 4th. She was to be succeeded by the magnificent new steamship *Genoa*, of 3,500 tons and 600 horse power, in November.

The English and French journals received by the *Union* contain further important details respecting the expedition against the Crimea. The allied forces landed, it appears, to the south of Eupatoria, and 32 miles nearer to Sebastopol than was at first expected. The landing place was at Old Fort in lat. 45°, only 30 miles distant from the Russian stronghold. Before the night of the 14th, the Commander-in-Chief had succeeded in landing all their infantry and part of their artillery. On the 15th the swell on shore considerably impeded operations, but some progress was made, supported by a division of the fleet under Sir E. LYONS. On the 16th the disembarkation of horses and baggage was proceeded with, with the utmost rapidity. The siege train and heavy baggage would not, probably, be landed at Old Fort, but was to be carried by the fleet to some place nearer Sebastopol, where they could be landed under the protection of the army, and thus save the fatigue and difficulty of conveyance by land. The army was to remain in position at Old Fort, till the 18th, when the troops were to march along the coast road on Sebastopol, in the vicinity of which, it was expected they would arrive about the 20th. The health of the troops was excellent.

OMAR PACHA received at Bucharest, on the 22d September, the following dispatch, dated Old Fort, Sept. 17, and signed by Marshal ST. ARNAUD and Lord RAGLAN:

"We beg leave to inform your Highness that we disembarked successfully to the north of Sebastopol. The enemy offered no opposition to our occupied our positions. The circumstance has produced the most profound impression on the Tartar population, who do not conceal their sympathy for our cause. All our guns and material have been landed, and we march upon Sebastopol with every confidence in the success of our grand enterprise."

A variety of rumors were current at the sailing of the steamer, one of which, that the Russians had been completely routed, with a loss of 18,000 men, was not credited.

A telegraphic dispatch from Vienna of the 26th, announces that Prince MENSCHIKOFF had advanced with his troops to Boriuuk, on the river Alma, and had taken up a position there awaiting the attack of the allies and expecting reinforcements. Prince MENSCHIKOFF had also telegraphed to St. Petersburg that the Russian fleet had sailed from Sebastopol to intercept the reserve from Varna. This was supposed to be too good news to be true.

The *Paris Gaulois* says that Prince MENSCHIKOFF will await the attack of the allied troops in the entrenched camp which protects Sebastopol. Should the camp be taken the town will be defenceless, and the old Prince will himself set fire to it in fulfilment of the resolution announced in his proclamation. Having done this he will assume the command of the fleet and risk a naval battle, not with the hope of success, but in the expectation of a glorious disaster.

Accounts from the Baltic state that it is nearly certain orders had been received from England for the bombardment of Revel before the return of the fleets.

The German papers mention a rumor from Bucharest of great importance if true, viz.: that the Russians had not only not evacuated Galatz, but that the corps of General GUYON, 60,000 strong, had recrossed the Danube and entered the Dobrudscha. Letters from Matschin also state that that place had been occupied again by the Russians, who were determined to try a *coup de main* against Varna.

The *Baltic* reached Liverpool at 9 A. M., on the 27th ultimo. Lord DENMAN died on the 26th.

The Viceroy of Egypt has given orders to dispatch 10,000 additional troops with a corresponding force of Artillery, to take part in the War in the East.

The Paris *Moniteur* announces that the Austrian General HESS made his entry into Bucharest on the 23d Sept. The Emperor of Austria had dispatched telegraphic orders to General HESS to offer no opposition to the movement of the Turkish army upon Galatz or Ibraila in the event of such a movement forming part of the combinations of OMAR PACHA. No impediment is to be thrown in the way by the Austrian Troops to offensive operations by the allies against Russia in the Principalities.

### *Progress of the Invasion of the Crimea—Latest News.*

*From the London Times, Sept. 26.*

The telegraphic intelligence which arrived yesterday through Vienna from the seat of war, adds little to the authentic information of the landing received on Sunday evening by the British Government. It seems, however, that OMAR PASHA had received on the 22d, a communication from the Crimea of the 17th, that is one day later than Lord RAGLAN's dispatch, and this message was immediately transmitted to Vienna. The principal particulars contained in this communication are, that the artillery and stores of the army had been disembarked, probably to avoid the danger of the transports being obliged to stand off from the coast during the equinoctial gales; that the Russians had retired as the allies advanced; that the troops are marching towards Sebastopol; and that the Tartar population of the Crimea are disposed in sympathise with the liberating armies. It is, of course, impossible for us to vouch for the accuracy of these statements, for, as we have recently seen in the case of the alleged landing at Eupatoria, the intelligence transmitted by the electric telegraph sometimes deceives every Government in Europe, and is seldom entirely worthy till confirmed by subsequent information. But these details are precisely what were to be expected under the known circumstances of the case, and every hour increases the confidence entertained that this prodigious expedition will be crowned with signal and even speedy success. There is every reason to hope that before the commencement of the equinoctial gales by the present week all the transports will have discharged their freight, and no doubt can now be entertained of the ability of the allied forces to hold their ground against the enemy, even if they were attacked. It is probable that just at the time of the equinox the weather will for a few days become rough and unsettled, but the autumnal season, which then sets in is commonly in these climates the most delightful period of the year, and the troops may rely on about six weeks of fair weather, with moderate heat, in the south of the Crimea, while the Russian forces north of the Isthmus will feel at a much earlier period the approach of Winter. As far as anything can be known of the movements of the forces, it indeed they had begun to move, we should say that the Russians were retiring, and that the allied armies were taking the direction of Sebastopol. Throughout the present campaign in the Crimea and the Baltic, and wherever the Russian forces have come into collision with the allies, the superiority of the Western Powers has been conspicuous; and, though in some instances they have had numbers of the Russian troops defeated, in none for which the Russian army was more prepared, they have entirely failed in even the attempt, and have gone to pieces before a spirited attack. They fight like men not in earnest, who are ready to accept the first decent pretext to lay down their arms. If the Russian soldiers, with their proverbial courage, are not ready to accept the pretext, they are ready to run away. Even the Prussian soldiers, who are generally supposed to be the best of the Continental troops, are reported to be disorganized by the inferiority of their arms and equipments, and to which the Russian soldiers are opposed, which are the watchwords of the French and English soldiers. The invasion of Russia in 1812 did undoubtedly awaken the strongest feelings of the Russian nation. The enemy were marching into the heart of Holy Mother Russia, and an invasion was too great to have not an invader who would have arrived in the Kremlin. But in the foreign dependencies and conquests of Russia, such as the Crimea, the Aland Isles, the Circassian coast, or even the Kingdom of Poland, no such patriotic zeal can be awakened. The Czar has not had much success in persuading his people that they are fighting for the diffusion of orthodox Christianity, and, in short, both his officers and his men behave like troops who would gladly learn that the war is at an end. As for the population of the countries which have been invaded, whether in the provinces of the Danube, on the Finnish islands and coasts, in Circassia, or in the Crimea, it is evident they hail with delight the overthrow of the Russian Government. Nowhere has the State received any support from its independent subjects; everywhere intimidation and terror have been used as the only means of supporting the authority of the Empire over the inhabitants. Gaudie Karlsky is a solitary exception to this remark; but there the inhabitants were roused because their property had been injudiciously threatened and destroyed. In the Crimea, there is great reason to suppose that if the inhabitants are kindly treated, paid for their produce, and made to understand the object of the expedition, they will be more ready to sympathize with the invaders than to assist their former masters. The Turkish division of the army will serve as a link between the Mahometan population and the European forces; for, although nearly 20 years have elapsed since the Turks were compelled to evacuate their last positions in the Crimea, the country has not lost its Turkish character, and it was thought by no means impossible that with a little assistance from the other side of the Black Sea, the population would be disposed to rise against the Russian yoke. Some of these Tartar chiefs have been incorporated in the bodies of Cossacks formed by the Russian Government from the different tribes which inhabit the vast steppes between the Don and the Sea of Azoff; but even the rude rights of these children of the desert, such as the choice of their Hetman and the government of their villages, have been jealously watched and curtailed by the Government, and, although the Cossack will fight whenever there is plunder and *raki* to be had, he is bound by very slender ties to the Government he serves. The truth is that, in spite of the absolute authority of this Russian system, the action of the Government necessarily becomes extremely feeble at immense distances from the capital, on remote races connected with the empire by mere conquest, and over provinces whose Scythian barbarism is at least allied to a sort of Scythian independence. Whether governed from Rome or from St. Petersburg, these tribes have ever been hardly amenable to positive authority, and they add as little to the strength of NICHOLAS as they did to that of TRAJAN. The real obstacles to be surmounted by our expedition are the regular forces which may be arrayed in the interior of the Crimea, and the regular means of defence which have undoubtedly been accumulated in Sebastopol. What they are can as yet hardly be conjectured, and can only be known with certainty when they have been put to the proof; but everything confirms the suspicion that the nearer we approach to the consummation of this enterprise the less formidable does our antagonist appear, and that even his strong places and his casemated batteries will not long defy the power of a resolute assailant.

### Developments of Austrian Policy on the Eastern War.

*Correspondence of the London Times.*

VIENNA, Saturday, Sept. 23.

An article entitled the "Present State of the Oriental Question," which has appeared in the Augsburg *Gazette*, deserves notice, as it evidently gives the opinions of the States represented at the Bamberg Conference on the Oriental question. After observing that if the expedition against Sebastopol should succeed, the Western Powers will in the Spring still more positively insist "on the moral and political humiliation of Russia," the Bavarian writer proceeds to say that the object of Germany must be "*by its resolute attitude to force both parties to peace.*" We can hardly think the word "*force*" is employed advisedly, as the Western Powers well know that the Oriental question cannot be settled in the way they wish unless Austria goes to war, and that she will not do unless she receives the positive assurance of the support of Prussia and the rest of Germany. The journalist is further of opinion that, even if Sebastopol and the whole of the Crimea should fall into the hands of the allies, "Russia will return to the charge next Spring with redoubled force, and expel the Turks and their allies from the peninsula." The attention of this misguided Government is called to the fact that it has acted rashly in pledging itself to the Western Powers to enter into no proceeds for peace of which the well known four conditions are not the basis, but the champions of the universal policy of the second-rate German States unanimously promises in their name that Austria shall not be left in the lurch or attacked with impunity, "if she should declare herself satisfied with the evacuation of the Principalities, guarantees being given for the future welfare of the same, and with a promise from Russia that the navigation of the Danube shall for the future be free." Should, however, the Austrian Cabinet think fit to conclude an offensive and defensive alliance with the Western Powers, there would probably be a complete schism in Germany. "Prussia is resolved to maintain her independence, and we are inclined to believe the German Confederation will follow her example." What we commonly call "pothouse," but what the Germans, who delight in euphony, would designate "coffee-house" politicians, still believe that Prussia will eventually go with Austria; but you have been correctly informed of the present state of things in Germany, and it will be seen that when the Diet meets in phase there will be three well defined parties. There will be Austria, with two or three of the second-rate States; Prussia, with her allies, Anhalt-Cothen, Anhalt-Dessau, Schwarzburg-Sondershausen, Schwartzburg-Rudolstadt, Reuss, Schaumburg-Lippe, &c., and, lastly, Bavaria, Saxony, and Wurtemberg, with the other States which attended the Bamberg Conference. The Germans do not take it kindly if a foreigner presumes to criticize the institutions of their great fatherland; but, be the consequences what they may, the truth must out. There never was, and probably never will be, a more humbug-ing political institution than the German Bund. When a sweeping charge of this kind is made, proof of its correctness ought to be given, and they you shall at once have. Austria, with a population of 38,000,000 and an army of about 350,000 men, has four votes in the Plenum, and Prussia, Bavaria, Saxony, Hanover, and Wurtemberg, have each as many. Baden, Hesse-Cassel, Hesse-Darmstadt, Holstein, and Luxembourg, have three votes each. Brunswick, Mecklenburg-Schwerin, and Nassau, have two votes, and the other States, with the four Free Cities, one each. Austria, whose contingent to the Bund is 94,232 men, with 192 guns, is on the same level with Saxony, which supplies only 12,000 men and no artillery, and she only has four times as many votes as Lichtenstein, whose contingent is 55 men! Is it not strange that, in spite of this, Austria should entertain a very high idea of the excellence of this political abortion?

### Spain Advised to Sell Cuba.

*Correspondence of London Times.*

MADRID, Wednesday, Sept. 20.

If it be true, as asserted and generally believed, that the United States are prepared to give a very large sum for the island of Cuba, it is not worth the consideration of the Spanish Government whether the loss of the revenue derived from that colony would not be much more than compensated by the immense improvements at home that the purchase money would enable it to make? But, if Cuba were sold with this view, other points must be made sure of. First, the duration of an honest Government; and, secondly, a reduction of the duties on foreign manufactures. A Government like that of which the Duke of Sotomayor fortunately rid Spain, would play at dicks and drakes with the Yankee dollars; a tariff such as at present here exists would certainly not induce foreign countries to offer Spain advantages for the sale of her produce. This, in an old island, has it cannot be then be reverted to. Among the most intelligent, honest, and unprejudiced men in Spain, there is only one opinion as to the process whereby she should derive her prosperity, namely, from her endless stores of material wealth, allied with from the riches of her passing soil and glorious climate, and not from the rubbishing fancies of October manufacturers.

[illegible]

[illegible] Lord DENMAN in delivering judgment on that occasion, "so utterly upon an inferior which only lend to any disgusting force that great and powerful assembly (the House of Commons.) But, when one of my fellow-subjects presents himself before me in this Court demanding justice for an injury, it is not at my option to grant or to withhold redress. I am bound to afford it him, if the law declares him entitled to it. Parliament is said to be supreme. It exists only subordinate to the supremacy. It follows, then, that such a tribunal of its supreme power cannot by itself." In those few words, and in the judicial power of enforcing that truth, lies the chiefest guardianship of the liberties of England.

Lord DENMAN lived the life of a reformer of abuses, and an enemy of all that in fact judgment should the honor or impaired the public utility of our institutions. His hatred of negro Slavery in every form rose in a passion, for he stood against cruelty and injustice, and in the wretched face of Widemyard Attwood and Spondaki slaves he beheld the unlimited and unmitigated evils and wrongs which have since disgraced humanity and profaned religion. He powerfully contributed to the furtherance of those reforms of the criminal law which Sir SAMUEL ROMILLY had commenced, and which Lord DENMAN brought to the seat of his own judicial experience. To the cause of education and freedom within the boundaries of law he at all times gave his hearty support, and in effect undertakings not on due in our day be more extended public education, for the reformation of civil delinquents, and for other acts of enlightened charity he readily bore his part. The warmth he had sometimes displayed as a partisan gradually subsided [illegible]

[illegible] Although these years have already elapsed since the death of Lord DENMAN, the recollection of his public services and his well-earned honors. It may be said of Lord DENMAN that he had not the impassioned oratorical eloquence of ERSKINE, nor the intuitive Parliamentary energy of BROUGHAM; he could not display the opinions and eminent learning of MACKINTOSH, and he did not possess the [illegible] of ROMILLY in the reform of the law, by the removal of its abuses and the mitigation of its severities, he was not his equal at the bar, and though he sought the battle of negro emancipation with a zeal and enthusiasm equaling WILBERFORCE and CLARKSON he had a more influential bearing in the country, and BURKE and SHERIDAN had more authority in the House of Commons. Upon the Bench it is impossible to rank the judicial attainments and legal capacity of Lord DENMAN with the eminent qualities of PARKE or TINDAL, LYNDHURST or CAMPBELL. But, if the highest rank he denied him upon an impartial survey of his character and life, it is an mean praise that in this constellation of talent he held an undisputed place as a star of the second magnitude. With these contemporaries, with those associates, with those competitors in the race of life he was, and he deserved to win, a fairness honorable place. For 12 years he filled the honorable seat of the Chief Justice of England, and, if any man excelled him by the vivacity of their genius or the acuteness of their intellect, none certainly surpassed, or perhaps equalled him, in the moral dignity which gave an appropriate and additional lustre to his office. The personal respect and outward bearing of Lord DENMAN in the administration of justice was strongly impressed with those moral qualities which he displayed in all the duties of life, and, though he occasionally evinced on the bench the passion of a partisan, we cannot but bear testimony to his undinching rectitude of purpose, his love of truth, his sincerity and simplicity of character, his extreme benevolence and humanity were the finest ornaments of the chief legal guardian of the public morals, and these qualities deserve to confer lasting honor upon his name.

Lord DENMAN was born on the 23d of July, 1779, in the house of his father, Dr. THOMAS DENMAN, who practised medicine with distinction in the metropolis in the latter half of the last century. His mother was an aunt of the present Sir BENJAMIN BRODIE, and it is a curious instance of the connection of the DENMAN family with the medical profession, that one of the sisters of Dr. DENMAN married Sir RICHARD CROFT, and the other Dr. BAILLIE, the two leading physicians of their time. In early childhood THOMAS DENMAN was sent to Palgrave School, near Diss, in Norfolk, which was then under the management of Mr. and Mrs. BARBAULD, and the Judge was sometimes wont to relate in after life that he had received from that accomplished lady the rudiments of instruction, and the first lessons of discipline. We have no record of young DENMAN's later school education, but we find him towards the close of the last century entered at St. John's College, Cambridge, where he graduated in 1800, without, however, appearing in the list of wranglers of that year. In 1806 he was called to the bar at Lincoln's-inn, and engaged in the active pursuit of the law. He had already married at an early age, and a rapidly-increasing family gave a stimulus to his professional exertions. The moment was peculiarly unfavorable to the public career of a young man entering in life with principles wholly opposed to the dominant school of high Tory politics, and connected by education, by taste, and by consciousness, with the men and the principles which were doomed to a quarter of a century of opposition before they obtained a footing in the Government of this country, and Mr. DENMAN had none of the qualifications which could recommend him to the PERCEVALS or the ELDONS of that day. He entered Parliament for the borough of Wareham at the general election of 1818, and at once took his seat with the Whig opposition. In the following year he was elected for Nottingham, for which place he continued to sit, to the great satisfaction of his constituents, until his promotion to the Bench in 1830. His first appearance in Parliament was in favor of certain reforms in the law, but it was not until 1830 that the extraordinary occasion of the Queen's trial called forth all his energy, and placed him in a more conspicuous position before the country. When Queen CAROLINE formed the determination of coming to this country upon the accession of her husband to the throne, Mr. BROUGHAM at once accepted the office of Her Majesty's Attorney General, while that of her Solicitor General was filled by Mr. DENMAN. It was impossible to decline was more openly upon the Government, upon the heads of the legal profession, and upon the private feelings of the King. We now look back with amazement on the spirit which pervaded the country at that time, and on the motives which induced men of the highest ability and the purest fame voluntarily to lend their advocacy to a client who had in a thousand ways degraded her position and disgraced her sex. But men like LYNDHURST and DENMAN saw in the Queen a woman whose innumerable offences against decency and virtue might, they thought, be palliated by the unworthy treatment she had met with from her husband, and the furious spirit of opposition which prevailed against GEORGE IV., and his Ministers stimulated them to the contest, and embellished even the worthless and repulsive object they consented to serve. The part taken by Mr. DENMAN in that memorable trial gave the public a high idea of his courage and uprightness, and contributed in no slight degree to its successful result. This success, however, was an offence not to be pardoned by the head of the law as long as Lord ELDON held the Great Seal, and accordingly the honors of his profession, to which Mr. DENMAN was amply entitled by his talents and his standing, were steadily withheld from him, as long as they depended on the will of the Chancellor. Mr. DENMAN was, however, appointed by the office of Common Serjeant by the Corporation of London in 1822, probably as a mark of their sympathy for the legal defenders of the Queen, in whose affairs Alderman WATHMAN had taken so active a part. It was not until 1828, when Lord LYNDHURST first held the Great Seal, that this injustice was repaired, and the King was *indeed in 1830, not, we believe, without difficulty*, to grant the patent of precedence to which Mr. DENMAN had long been entitled.

In 1830 the scene changed, and upon the formation of Lord GREY's Government, Sir THOMAS DENMAN was immediately raised to the post of Attorney General, which he held during the momentous debates on the Reform Bill. In 1832, however, upon the death of Lord TENTERDEN, he was appointed to the Chief Justiceship of the Court of Queen's Bench, which he held till 1850, having been raised to the peerage in 1834. As a Judge we have already observed that Lord DENMAN can be ranked with the highest legal authorities who have presided over that Court, but no man ever took a better view of its duties to society. No question illustrates the conduct of the Court in the difficult case of "Stockdale vs. Hansard," when it was directly assailed by one branch of the Legislature, is a memorable illustration of the exercise of that constitutional power which enables our Judges to interpose the authority of the law against the arbitrary pretensions of the most powerful body in the State, and vindicate the rights of the humblest suitor. "Most willingly would I decline," said Lord DENMAN in delivering judgment on that occasion, "a contest upon an inferior which only lead to any disgusting force that great and powerful assembly (the House of Commons.) But, when one of my fellow-subjects presents himself before me in this Court demanding justice for an injury, it is not at my option to grant or to withhold redress. I am bound to afford it him, if the law declares him entitled to it. Parliament is said to be supreme. It exists only subordinate to the supremacy. It follows, then, that such a tribunal of its supreme power cannot by itself." In those few words, and in the judicial power of enforcing that truth, lies the chiefest guardianship of the liberties of England.

Lord DENMAN lived the life of a reformer of abuses, and an enemy of all that in fact judgment should the honor or impaired the public utility of our institutions. NEW-YORK, THURSDAY, OCT. 12, 1854.

The Loss of the Arctic.

Not within our remembrance has any intelligence so sorely smitten the public heart, as that of the wreck of the *Arctic* and the loss of her hundreds of valuable lives. Throughout the day, in all quarters of the City and among all classes of people, a deep and solemn excitement prevailed,—grief for the dead, sympathy with the bereaved, profound commiseration for the leading projector and proprietor of the line of steamers to which the *Arctic* belonged, stretching the tide of feeling which swept over our whole community. The minutest details of the transaction were eagerly sought, and intense anxiety prevailed to catch even a glimpse of hope that the name of some new survivor might be revealed. The statement of Mr. BURNS, published in the earlier part of our edition yesterday morning, gave all the information that could be presumed upon the subject until the *Europa's* news was telegraphed from Halifax, which gave additional particulars and encouraged a hope that a considerable number of the *Arctic's* passengers may have been rescued by vessels passing in the vicinity of the disaster. The *Arctic*, it seems, had six boats. The chief officer, Mr. GOURLEY, with the boatswain and three sailors, took one of them to aid the iron steamer, before it was known that the *Arctic* was injured; on returning, the boat could not be hoisted, and so far as we learn has not since been heard from. Mr. BLANCHARD, the second officer, afterwards took one of the other boats on the starboard side, and picked up eighteen or twenty persons who jumped overboard on seeing it lowered;—he also fell in with another boat which had been lowered on the other side full of persons, part of whom were transferred to his boat. These two boats, one containing nineteen and the other twenty-six persons, *forty-five* in all, were landed near Cape Race and the names of the survivors are known. A fourth boat had been lowered for the purpose of constructing a raft, and was cut adrift from the ship;—her *thirty-five* passengers were picked up by the *Huron*, and part taken to Quebec, and part, including Mr. BURNS, sent to this port by the *Delaware*. This makes *seventy-seven* known to have been saved, and leaves *two boats* unaccounted for, unless one of them was the disabled "life car" met by the boat on leaving the raft, as reported by Mr. BURNS. Mr. BURNS states that "*four* of the five life-boats, believed to have been well provisioned, containing the engineers, sailors, a few passengers, and all the officers except the captain and third mate, left the ship at an early stage." But this is clearly a mistake, and is corrected by the statement of Mr. BLANCHARD. There is at all events, one boat and possibly two, to be heard from; it cannot be known with any accuracy, who were, or were not, on board.

Our knowledge of the incidents which preceded the engulfment of the noble steamer with those on board, is far from complete or satisfactory. It is certainly very strange that, if she floated three or four hours, as stated by Mr. BURNS, nothing more effectual should have been done towards constructing rafts, lowering boats and providing in other ways for the rescue of the passengers. From the facts stated, we are driven to the belief that there was *an entire lack of disciplined control over the crew of the ship*. No authority enforced or directed their action. While the passengers were working the pumps, the firemen, seamen, engineers and others seem to have been seeking their own security. The fact that out of the whole number believed to have been saved, more than *seventy* were officers, firemen, seamen and waiters, and only twenty were passengers, speaks volumes in condemnation of the conduct of the crew. While it would be premature to express a decided opinion on this point, we cannot help believing that a lack of discipline,—of thorough command and control over the crew, had much to do with the fearful loss of life which this catastrophe has involved.

Captain LEWIS, so far as his personal demeanor and conduct are concerned, seems to have behaved with great coolness, and to have directed all his efforts to save the ship, regardless of himself—resolved, indeed, to share her fate. We do not see evidences of the energetic command so essential in such a crisis, and which, if it had been effective, might have mitigated the calamity;—but there was no shrinking from the duty or the danger,—no eager-ness for personal safety, or for the preservation of his own family, at the expense of other lives.

We hear censure expressed because the steamer should have been running at so great a speed through so dense a fog. We believe it is agreed among seamen that *to the steamer herself*, the danger at *high speed* is *less*. In case of collision with a vessel or other MOVING BODY, than at *low speed*,—because that momentum and power to ride over such obstacles has correspondingly greater. We believe, too, that all the ocean steamers habitually practice on this rule, and that full speed is always kept up under such circumstances. In the present instance it is urged that the iron propeller struck keys *Arctic* at very nearly right angles. It was therefore, the *force* of the *Arctic* that broke off her iron bow, and if the *Arctic* had been going slower, and that blow had less force, the propeller must have been driven through her, and sunk her instantly. It does not seem to us, therefore, at all clear that the *Arctic's* speed

[illegible]

in haste, without being held to any undue responsibility for the disaster which has fallen upon her crew and passengers, which [illegible] other. It is not improbable, however, that the *Arctic* was fairly built. It will be seen by the description of her which we give in another column, that she was very strongly built,—that no precautions for her safety which timber and iron could afford, were neglected. The steamers of the COLLINS line are undoubtedly the *strongest* vessels that float on the ocean; and with the exception possibly of the *Atlantic*, the *Arctic* was quite as strong as either of the others. Her machinery was in good order, and everything that foresight could effect to render her voyage safe, had been done. The fact that Mr. COLLINS had entrusted his whole family to her decks, proves conclusively his full confidence in her stability.

The disaster which has befallen her adds another fact to the evidence, which has recently accumulated so fast, of the perils which at the best beset the navigation of the Ocean. The wonderful exemption from accident which our steamers have so long enjoyed, had almost blinded the community to the fact that any danger was incurred. Against danger in its usual forms, full precautions had indeed been taken;—but no foresight and no precaution can banish entirely the perils of the sea, or prevent the occurrence of such disasters as that which has just carried desolation and grief into both hemispheres.

Knowing the intense anxiety which prevails to learn all possible details of the catastrophe, we surrender a very large portion of our space this morning to such particulars as our staff of reporters have been able to collect from survivors of the wreck.

October Elections—Sweeping Results.

The story of the Tenth of October at the polls in the States of Pennsylvania, Ohio and Indiana is seen told. It points to the overwhelming defeat of Gov. BIGLER and the Pierce Administration in the first-named Commonwealth, with a large Whig preponderance in the new delegation to Congress, and a complete rout of the Democratic party on the Nebraska issue in the Congressional elections in Ohio and Indiana. There is no mistaking the complexion of the returns from either quarter. The popular vote has been very large, and in Pennsylvania, particularly, owing to the general character of the election, it was as full as an excited canvass could reasonably make it. Hon. JAMES POLLOCK, of Northumberland, formerly a Whig member of Congress, is made Governor by a majority which promises, from present appearances, to exceed TEN THOUSAND votes; while the delegation in Congress will be more than reversed as compared with the present division of 16 Democrats to nine Whigs.

In Ohio, the popular State majority for the Whig and Anti-Nebraska candidates for the Supreme Bench and Board of Public Works, will count by *tens of thousands*, and as far as heard from, there is not a solitary Administration Congressman returned. Dr. GANO, in the Columbus District, present Democratic Chairman of the Post-Office Committee, and who voted for the Nebraska bill, is beaten 1,800 votes by Mr. SAMUEL GALLOWAY, Whig, and the Hamilton or Cincinnati district returns two Whig Congressmen by an aggregate majority of *six or seven thousand*.

Six of the seven Congressional Districts in Indiana have been heard from, and the result is uniform against the Administration on the Nebraska issue; the aggregate majority is *over seven thousand*, and in one of the Districts, singly, *twenty-five hundred*.

The new element of Native Americanism, under the various names of Know-Nothings and American Reform, entered largely into the canvass in the cities and towns of Pennsylvania and Ohio, swelling the majorities of the successful candidates, and producing, in many cases, unexpected or conflicting results. Thus in Philadelphia, the press Administration party made the issue direct on the Governor's election, against the Know-Nothings as well as the Whigs, using every means, and with evident success, to drive the Democratic Know-Nothings from the support of Mr. POLLOCK, whose majority is 3,002, while the Democratic nominee for Canal Commissioner received the entire strength of the new party, and goes out of the City with 23,000 majority. On the other hand, in the coal mining county of Schuylkill, the large Foreign vote appears to have been polled to a man for Governor BIGLER, increasing his majority in 1851 from 674 to 1,600. With this exception and in the riotous borough of Erie, with which he took especial care last Winter to sympathize, he loses in every county in the Commonwealth.

The Know-Nothings and Whigs yesterday carried the Mayoralty of Baltimore by 2,741 majority over the Democratic candidate, together with the City Councils.

The Political Economist is Wanted.

Curious phenomena are passing before us, which we will thank Political Economists to explain. The price of newspapers seems to be going up all the country over. Some do it by adding another cent to their daily charge, others indirectly by contracting their dimensions, while their subscriptions hold at the old rates. Yet, newspapers which a few years ago were luxuries, now are necessaries, and necessaries should not cost more than the same thing did before experience recognized their necessity.

In the City, rides cost less and less. Sixpence three years ago was held cheap enough for the shortest ride. Now the roads are lengthened and the routes varied, but 6*c*pence is held too much to pay to be carried over them, though horse flesh is doubled in value and every item of cost for carriage is increased. Meanwhile out of the cities railroad fares and steamboat charges are rising. The freight tariffs every where are increased, and the low rates of three years ago seem fabulous.

Coal drives wood out of the market, and then comes to cost so much that we cannot afford to burn it. New mines are opened and beds of many miles in extent are laid bare, yet [illegible] 1853.

[illegible]

wrought in agricultural implements, yet flour goes at famine prices.

[illegible]

owned by gentlemen and Scientific; and the mode of fastening them has been vastly improved, yet wages still higher and higher every year. Will Political Economy tell us how these things happen, and where the end will be? Prices of provisions, fuel and clothing go up in the Fall, and stay for wages prevail in the Spring. If they march with equal pace, neither producer nor consumer gains by the change. It seems as if all the advantage comes to the side that longest maintains its rise before the other secures its advance.

Prospective Abatement of Nuisances.

The act of Parliament requiring manufacturers and furnace owners in London to consume their smoke, is stimulating the ingenuity of the Kingdom to discover the most feasible way of doing that very desirable job. Pamphlets are published, inventions patented, and theories are suggested in abundance. Some of them promise success. Some of the apparatus employed purify the smoke by means of a shower of water. Some give a motion to bars or parts of the furnace, by means of machinery. Some contrive to admit warm air into the furnace, by passing it through a series of screens, heated by the furnace, and opening and shutting, according as the fire is more or less intense.

Others introduce a stream of heated air at the end of the furnace, and so secure the object. But none have been long enough tried to furnish satisfaction as to their practicability. Our own City has a great interest in this matter; not that the smoke nuisance here is comparable to that of London. But whatever will consume their smoke may, by slight variations, be made to burn up the noisome vapor and steam of *our* factories. The issue of their experiments will determine whether it is possible to continue our soap and candle factories, and the like, in the heart of the City. That the nuisances now tolerated in the central portions of our metropolis will not long be, is evident to every reflecting person. Whether the nuisance can be abated by some means such as the Londoners now seek, or only by removal to the desolate outskirts, is the question of great importance to many interests among us, that is herein involved.

The Whaling Business from a Pacific Port.

A whaler, the *R. Adams*, of 271 tons, was fitting out for a cruise from San Francisco, when our last news from that port took wing. This is a fulfilment of one of our earliest prophecies touching the excellence of our Pacific possessions. San Francisco is a natural recruiting place for whalers from the Atlantic side, and it early occurred to capitalists that clippers could more profitably transport the oil from San Francisco to the Eastern markets than the dull sailers which are put upon the cruise, not because they are better than swifter vessels, but because they will do.

The high wages, the scarcity of men and the scarcity of provision there, were made serious objections to the project. But now, wages stand remarkably near each other in San Francisco and New-York. There appear to be as many restless and uneasy men ready to take their "lay" there as here, and many stores and much provision are even cheaper there than with us just now. The *R. Adams* was manned with the greatest ease, and not a landsman is on board of her. Our whalers scour the States and go to sea often, many days past their time, with crews of unwilling green ones. The California papers wisely urge that the State need only to free whalers from the operations of all pilot enactments to make San Francisco a great whaling port.

A Short Supply.

The Doctorate of Divinity (D. D.) has been conferred this year on 57 clergymen; on one of them, Rev. WM. GOODELL, by two Colleges; and on two others, Rev. Drs. BRAHAM and ALEXANDER, by other colleges in previous years. The number is less by eleven than in 1853. The Doctorate of Laws (LL. D.) has been conferred this year on 41 individuals; on one of them, Gov. WASHBURN, by two colleges. The number is less by ten than in 1853. The whole number of Honorary Doctorates conferred by 48 American Colleges and Universities for 1854 is 130, of which 45 were by New-England Colleges, and nearly one-fourth by four institutions: Harvard, Union, Jefferson and Brown. One College, which last year (1853) granted five Doctorates, has not yet been heard from. Possibly one or two others may have escaped our observation. Of the 60 Doctorates of Divinity, 7 were conferred by Jefferson, 7 by Union, and 5 each by Harvard, Rochester and Hampden Sidney; or more than one-fourth of the whole number by five institutions. Less than half of the number of Collegiate Institutions are reported as having indulged in these benefactions;—18 only, out of more than 100. If any of the remaining 72 or more have exercised their prerogative on this matter, it has been done in a quiet way and without any publicity.—*New-York Evangelist.*

From the above it would seem that the crop of doctors is less this year than usual. But the crackers are no more to be trusted here than among the potatoes, corn and grains. It is their common cry to enhance the appreciation of what are in the market, by assurances of a short supply. Let us not be deceived. Wait in patience till the other 72 Colleges speak out, and we doubt not the doctors will be plenty enough. Churches in need of a preacher, Colleges lacking a Professor, publishers in want of a titled author, will do well to wait. Just as yet do about your coal—get at the high prices, only what you need for present consumption; and there will be enough to furnish a full supply at the usual rates. The Union College dodge has the very same object as the miners—striving to hold back the supply to raise the value of what comes to market. If it is tolerated, D. Ds. will be as scarce as they were fifty years ago, and as LL. D. will be as seldom found as is a fit teacher of the Civil law.

Musical.

NIBLO'S SALOON.—This evening Mr. WM. MASON gives his first concert in New-York. The programme is unusually varied and classical. Mr. MASON will be assisted by the Brothers MOLLENHAUER, who will execute a couple of their famous duos and a solo.

These with us want, to be a crowded attendance. The price of admission (Fifty cents) will enable every one to hear this rechercha entertainment.

ENGLISH OPERA.—There was another enchanting enchantress at the Broadway Theatre last evening. Miss LOUISA PYNE sang with the same exquisite skill and grace, and more than retained the favorable impression she created on Monday evening.

To-night BALFE's Opera of the "Bohemian Girl" [illegible] Miss PYNE in the *Arline*, Miss PYNE the Queen of the Gipsies, SUBREMI the Count Arnheim and Mr. G. [illegible] the *Thaddeus*.

[illegible]

# LATER FROM EUROPE.

ARRIVAL OF THE EUROPA AT HALIFAX.

Latest Intelligence from the Seat of War.

THE ATTACK ON SEBASTOPOL.

RISE IN BREADSTUFFS—MARKETS FIRMER.

By Telegraph to the New-York Daily Times.

HALIFAX, Wednesday, Oct. 11.

The Royal Mail steamship Europa, Capt. SHANNON, from Liverpool Sept. 30, at 1 o'clock P. M., arrived at Halifax at 7 o'clock this A. M.

The Collins steamship Baltic, from New-York on the 16th Sept., arrived at Liverpool at 3 o'clock A. M. of Wednesday, the 27th inst.

The steamships *Washington* and *Clyde*, from New-York, arrived out on the 23d ult.—the former at Southampton, and the latter at Glasgow.

The United States steam-frigate San Jacinto left Southampton on the afternoon of the 27th, with a Deal pilot on board, for the Baltic, hoping to be in time to witness the bombardment of Revel.

The clipper-ship Red Jacket had arrived at Melbourne, Australia, in 72 days' passage from Liverpool, which port she left on the 4th of May last.

Although there are, as yet, no tidings of an engagement between the Allies and Russian forces in the Crimea, the news is in details is exceedingly interesting.

The public anxiety in England was at the highest pitch when the *Europa* sailed, news of an engagement being looked for at any moment.

MENSCHIKOFF, with the Russian forces, had advanced to Burlak on River Alma, there to give battle to the allies—and it was thought that the 20th September would bring the two armies face to face.

The allies had sent a force into the Sea of Azof, to intercept Russian transports.

LATEST INTELLIGENCE.

By Telegraph and European Telegraph.

VIENNA—Friday Evening.

It is rumored in the Greek Mercantile Circulars, that the allies have obtained a signal advantage. The funds have risen in consequence.

PARIS, Tuesday Evening—3 P. M.

Further telegraphic messages from Vienna confirm the accounts of the favorable disposition manifested towards the Allies by the Turkish population of the Crimea. The sanitary condition of the Allied Army was excellent.

An official bulletin communicated to the Ambassadors at Constantinople, and dated from the Bivouac at Old Fort, on the 18th, announces that the Allies had intended, the next day, to attack an entrenched camp of 10,000 Russians, posted in the direction of Sebastopol, but that the camp had been raised in the night, and the Russians fell back upon the town.

Twelve thousand Tartars had offered themselves to the allies as volunteers, and their services were accepted.

It was reported that the attack upon Sebastopol had been fixed for the 20th of September.

The Russian fleet had been reconnoitred in the port of Sebastopol by the French steamship *Napoleon*.

The Three Per Cents closed to-day at 75.25 for the end of the month, and the Four-and-a-Half Per Cents at 96.90.

MADRID, Sept. 26.—The Three Per Cents were done to-day at 24.

The Siege of Sebastopol.

It is confirmed that on the 13th September Eupatoria was occupied without opposition by 2,000 Turks, 1,000 French and 1,000 English troops. The Russian garrison, numbering 400, surrendered at discretion. The advanced guard was under command of *Prince NAPOLEON*. On the 14th the main army landed, unopposed, half-way between Eupatoria and Sebastopol, horses, artillery and munitions, all safely. The Russians retired in good order as the allies landed.

MENSCHIKOFF, who had his head-quarters at Simferopol, immediately advanced to Burtsuck on the river Alma, where he awaits reinforcements to give battle to the Allies.

It was confidently stated on the Paris Bourse that on the 19th the Allies and Russians met and a battle ensued. The French came first into action, the English soon came up, and the Russians retired without much loss. If true, this occurring on the 19th could only have been skirmishing, not a battle between the main armies.

The Russian Embassy at Vienna had received a dispatch dated the 22d, from the Crimea, but all that had transpired was, that it contained news unfavorable to the Russians.

The latest date from the Crimea (certain) is the 19th, when the allies held the road from Cape Balbe to Sinferopol. It was intended to cross the Alma on the 19th, but Marshal St. ARNAUD had telegraphed to Paris that there was an unavoidable delay of two days—cause not stated—which would prevent their marching till the 21st.

Fifteen sail of the line were off Sebastopol.

A Russian courier who had been captured, stated that the whole Russian force was only 45,000.

Russian accounts of the 19th say that Gen. CANROBERT had a fortified position at Eupatoria, and that the main body of the Allies was on a small river north of a parallel with the river Alma. Thirty thousand Russians were posted at the latter point, but with insufficient artillery.

Admiral LYONS' squadron, with 100 transports, had left the Crimea to fetch the reserve.

Baron HYNE, the Austrian General, arrived at Bucharest on 22d of Sept., and was received with distinction by OMAR PACHA.

News of a battle was looked for in London every hour, and the public anxiety was intense.

The Danube.

Lord RAGLAN had called for a division in Bessarabia, consequently the Turks were advancing to the Pruth. Ten advance guards set out from Bucharest on the 27th, and OMAR PACHA would follow on the 29th. Ibrail and Galatz will be the base of operations. Only two battalions will remain at Bucharest, and small detachments will occupy the various points on the left of the Danube.

A dispatch says that OMAR is preparing to besiege Ismail.

The Russians are entrenching their Winter quarters along all the line of the Pruth.

The Baltic.

News of the bombardment of Revel was daily expected, but the English Press consider it would be impolitic at this late season, in the absence of the French fleet. At last accounts the larger portion of the fleet was at Ledsund, but the British would shortly leave for Bare Sound or Margen. Admiral PLUMRIDGE's squadron was at Margen.

The Russian fleet at Helsingfors consists of 9 ships mounting 700 guns; at Cronstadt, 21 ships mounting 1,000 guns, besides 6 steamers. They were striking their topmasts, and preparing for Winter.

On the 19th, the French and English fleets separated,—the French under Admiral DUCHESNE, returning home.

The White Sea.

Capt. LYONS officially announces to the British Admiralty the destruction of the town of Kola, which he burned to the ground, without losing a man.

The Sea of Azof.

Four Anglo-French steamers will endeavor to force an entry into the Sea of Azof, to capture Russian transports, which now convoy reinforcements into the Crimea.

On the 12th, a Turkish ship at Constantinople reported that an army of 30,000 was at Taganrog, ready to be conveyed in possession and gunboats to Yenikale or Kaffa.

The *Journal of Constantinople* states that this force had put to sea, was overtaken by a tempest and 300 men drowned. This is considered doubtful.

[illegible]

from the pass of Baiderat. He has shown Russian [illegible] and HAMMOND Pasha. GORTSCHAKOFF has offended [illegible] with Austria, WIDDIN BEY, and threatens an immediate attack on Tulcia.

[illegible] has had two engagements, both successful, against Gen. WRANGEL.

A division of British shipping has departed to the Turks, bringing 600 guns.

FRANCE.

The Austrian Circular rates of the 14th ult., addressed to all the States of the Germanic Confederation, except the two Mecklenburgs, has been met by a Russian Note, dated the 21st, calling upon Austria to define categorically what is meant by German interests.

A Prussian Note has also been presented to the Diet, promising a moral support to the Guarantees required from Russia, but urges a postponement of all discussion on the subject.

Greek Affairs.

According to the terms of a note exchanged between France, England and Bavaria, the Bavarian Government has sent M. MAUVIER as a Special Envoy to reason King OTHO into obedience.

The Sultan has extended, for one month, the period allowed for settling the difficulties with the Porte.

A committee of merchants has been appointed at Constantinople, to regulate the rates of foreign exchange and paper money.

GREAT BRITAIN.

Captain McCLURE and the crew of his Polar Expedition had arrived at Cork.

The Marquis of GRANBY, and Mrs. WARNER the actress, are dead.

Alderman MOON has been elected Lord Mayor of London.

FRANCE.

A new Civic Police for Paris is to be organized on the model of the London Police.

Prince PONIATOWSKI, the Tuscan Minister at Paris, has resigned, and intends to become a naturalized French subject. He is a favorite of the Emperor, who will appoint him to high office.

General PRASSONDE is dead. He was 69 years of age.

SPAIN.

Renewed disturbances are feared at Madrid, but as yet there has been no open outbreak.

Barcelona is more quiet.

Mr. SOULE is in Paris, on his way to Madrid. The Times correspondent again asserts that the Spanish authorities hold the proof of Mr. SOULE's connection with the recent insurrectionary attempts.

The Government has removed all French refugees into the interior, beyond the Ebro. They will not be allowed to reside in Aragon, Catalonia, the Basque Provinces or Madrid.

It is not true that O'DONNELL will accept the Ministry of Foreign Affairs.

Gens. CORDOVA, MANAGUERSSA and MARRIED will soon return to Spain.

ITALY.

Report says that GARIBALDI and Gen. ROSSELI have crossed the Sardinian frontier to fight a duel, arising out of GARIBALDI's letter disclaiming the recent insurrection at Parma.

The Papal Government has just concluded a loan of four million crowns with the ROTHSCHILDS.

The cholera is committing great ravages at Messina. All the Consuls, except the Bey's and the American, had fled the City.

POLAND.

A decree postpones until December the reduction of import duties on Corn and other articles of food.

DENMARK.

The dissensions between the King and the people of Jutland, respecting the Constitution, continue.

RUSSIA.

JASTERLIN, of Moscow, and H. J. BALDELY, of Shuya, both calico printers, have failed.

Respecting political matters, the only remark is that whatever may happen, the Czar will not give in.

There has been a new issue of paper money to the extent of six million roubles.

*Via* the Baltic, it is stated that the discontent of the Russian population is increasing, and even threatens to bring on a revolution.

INDIA.

Bombay dates are to Aug. 29. Trade was reported dull. EXCHANGE at Calcutta was at 6.11½

CHINA.

The dates by the Overland Mail are from Canton, Aug. 5; Shanghai, July 24; Amoy, July 29, and Singapore, Aug. 12.

Canton was in a state of siege. Business was entirely suspended, and the city would in a few days be in the hands of the insurgents. No Tea was being brought to market.

Whampoa and Pushman were still held by the insurgents.

EXCHANGE at Shanghai, 6*s.* and at Canton, 4.11.

Additional dispatches from Hong Kong say that the exports of new tea were four millions of pounds, and of silk 1,363. There had been no arrivals of tea at Canton since the previous mail. Of fifty chops previously received, forty-five were shipped.

At Shanghai there was little business doing either in tea or silk, and the quality of the latter is inferior.

The question respecting duties was expected to be compromised by a deposit of one-third of the original amount.

The demand for imported goods had improved.

AUSTRALIA.

Sydney dates, by the Overland Mail, are to July 26, and Melbourne to July 25. There was great depression in commercial affairs.

Gold at Sydney was quoted £3 17*s.*, and at Port Philip, £4.

COMMERCIAL INTELLIGENCE.

Liverpool Cotton Market....Sept. 29.

In the Liverpool Cotton market there had been a good demand at hardening prices, the quotations had not been changed. The improved tone was mostly apparent in the lower grades. The business of the week amounted to 54,000 bales.

DENNISTOUN quotes Fair Orleans, 6¼d.; Middlings, 5½d. @5 3-16d.; Fair Mobiles, 6d.; Middlings 5½d.; Fair Uplands, 6*d.*; Middling 5*d.*, 5*d.*

The Brokers' circular reports a rather more moderate demand from the trade and for export, and the market was more regular for the current qualities of American, while the better grades were more freely offered at rather lower rates. Pots opened with a speculative inquiry, but advanced 1*d.* The total sales of the week were 55,730 bales, including 3,700 for speculation and export. The sales of to-day (Friday) were 6,000 bales, the market closing steady.

Liverpool Corn Market....Sept. 29.

BREADSTUFFS had, with an upward tendency, continued bidders to establish an advance of 1*d.* on Wheat; in oats, 6*d.* on Flour; and on Corn. Western Canal Flour was quoted at 32*s.* 6*d.* The arrivals of all articles were small, and stocks were light.

Brown, Shipley & Co. report Western Canal Flour at 31*s.* @32*s.* 6*d.*; Philadelphia and Baltimore, 32*s.* 6*d.* @33*s.*; Ohio, 34*s.* @35*s.* 6*d.*; Rye, 30*s.* @32*s.* 6*d.*; White Wheat, 9*s.* @9*s.* 3*d.*; Red, 8*s.* 9*d.* @9*s.*; White and Yellow Corn, [illegible]

Liverpool Provisions Market....Sept. 29.

[illegible] were awaiting the quotations of the Cotton market. Pork unchanged. BACON [illegible] TALLOW there were buyers at [illegible] Rosin was wanted. Cotton Seed oil, which [illegible] Rice was steady, and wanted. Tea—Sales this week [illegible] and prices irregular.

Liverpool Produce Market....Sept. 29.

[illegible] were in good demand at 32*s.* 6*d.* for Montreal Pearls, and 30*s.* 6*d.* for Pots. There was nothing doing in TURPENTINE. SPIRITS were wanted 30*s.* Rosin was in fair demand; and there had been sales of 1,000 bbls. common, 4*s.* 4*d.*, 3*s.* 6*d.*, 4*s.* 6*d.* RICE—There had been a large business in Indian and Carolina; the latter was quoted 30*s.* @34*s.* 6*d.*

Pork, Bacon and Cotton prices were nominally lower, but holders were pressing on the market. Tallow was a shade higher. Cotton is quoted at 3½d. WHALE OIL was 37*s.* 1,500 tuns sold at £63 10*s.* @£64. WHALE BONE was nominally in price, lately quoted at £3 10*s.* @£4 10*s.* RAPE was quoted at £36. 6*d.* DITTO [illegible] was nominally [illegible] price, with fluctuations.

London Money Market.

BARNARD, BURNEY & Co. report that Money was [illegible] in demand. Consols left off at 90¼@¾. The [illegible]

[illegible]

Section 1 [illegible]

American Securities.

BARNARD report a slight improvement in American Stocks, with a fair business. Quotations are as follows: U. S. Stocks, 1867, [illegible]; U. S. Stocks, 1868, [illegible]; Pennsylvania 5s, Sterling Bonds, [illegible]; Pennsylvania 5s, Sterling Bonds, [illegible]; Virginia 6s, Sterling Bonds, [illegible]; Alabama 5s, Sterling Bonds, [illegible]; Virginia 6s, Dollar Bonds, [illegible]; Virginia 6s, Sterling Bonds, [illegible]; Boston 6s, Dollar Bonds, [illegible]; Pennsylvania Central Railroad 5s, [illegible]; N. Y. & Erie, 1st Mortgage, [illegible]; N. Y. & Erie, 2d Mortgage, [illegible]; N. Y. & Erie, 3d Mortgage, [illegible]; N. Y. & Erie, Common, [illegible]

In BREADSTUFFS the advancing tendency noticed on the departure of the *Canada* continued, and prices of all descriptions under an improvement more than of the previous week.

Tobacco, Cotton and Rice unchanged on change.

The Liverpool Market closed at [illegible]; Consols closed at 90¼.

Liverpool Freight Statistics.

Freights to the United States continued about the same, with rather a better feeling. We quote Cotton to New-York, 7-16*d.* sterling, and hogsheads, 5/8*d.* To Philadelphia, 5/8*d.* sterling, and hogsheads, 5/8*d.* To Baltimore, 5/8*d.* sterling, and hogsheads, 5/8*d.* To New-Orleans, 5/8*d.* sterling, 15*c.* Passengers to Boston, £3 10*s.*@£4; to other ports in the United States, £3.

Departures of the Europa for Boston.

HALIFAX, Wednesday, Oct. 11.

The *Europa* left for Boston at 11 A. M., where she will be due on Thursday morning.

From Havre, Brazil.

Capt. ATKINS, of the British brig Talbot, arrived yesterday morning, reports that place as generally healthy, the yellow fever having completely disappeared.

At Curacoa, Sept. 21, per bark *Venus*, salt was selling at $1 per bbl.

☞ The Randolph Island boys, who were to visit the City to-day (Thursday) have postponed their visit till next week on account of the gloom cast over the City by the loss of the *Arctic*.

BUSINESS NOTICES.

### SHIPPING NEWS.

**Arrival of Steamer Baltic.**

The steamer *Baltic*, Capt. Comstock, from Liverpool Sept. 27, and Queenstown on the 29th, passed Cape Race on Tuesday morning, and arrived at Antwerp at 10 o'clock A. M., yesterday morning, and 120 hours from Liverpool. She left Cape Cod on Sunday morning, and has brought the Western *Light* on Sunday, Portland on Monday, and Boston on Tuesday, and has furnished us with early announcements of the arrival of the steamer. Mr. Matthew Hale, one of our pilots, who left Boston in the pilot boat *Hope*, on Tuesday morning, and cruised off Cape Cod, boarded the steamer off Cape Cod, and brought us the news. The steamer was detained off Cape Cod by the fog, and did not reach Antwerp until 10 o'clock A. M., yesterday morning. Mr. Hale, who was on board the steamer, informs us that a man named Thomas Ryan, a native of Ireland, who was employed as a fireman on board the steamer, was accidentally killed by the falling of a piece of timber, which was being hoisted from the upper deck.

The *Baltic* left Liverpool on Wednesday, Sept. 27, at 4 o'clock P. M., and Queenstown the next morning at 10 o'clock A. M., and has made the passage to Antwerp in 10 days and 22 hours, being the shortest time in which any steamer has made the passage. The *Baltic* has brought 175 cabin passengers, and 120 in the steerage, and 1,000 tons of general merchandise, and 1,000 tons of coal. The *Baltic* has experienced very fine weather, with the exception of the last three days, when she encountered a heavy gale from the southwest, which has prevented her from making a more rapid passage. The *Baltic* has brought the following specie:

| | |
|---|---|
| Adam & Co. | $40,000 |
| Wm. Heard & Co. | $5,000 |
| Ward & Co. | $1,000 |
| Kemble & Co. | $1,000 |
| Wm. Thomas | $1,000 |
| Wm. Thomas | $1,000 |

## LATEST INTELLIGENCE.

### OCTOBER ELECTIONS.

WASHINGTON, Wednesday, Oct. 11.

In the Fifth Congressional District, Pennsylvania, Benjamin Matlack, Free-Soiler, has been elected by 1,000 maj., over Barclay, Whig.

In the Fourth, Mr. Hallowell, Whig and Native, is elected by 1,800 maj. over Lahay, Dem.

In the Fourth—James Brown, Whig and Native, is elected by 1,800 maj. over H. H. Foulkrod, Dem.

The Majority for Pollock, Whig, for Governor, in this city, is 9,100.

Lancaster County gives 6,000 majority for Pollock.

In Cadiz County, BIGLER has about 300 majority, having a loss of 1,000.

Allegheny Co.—In 23 Districts, Pollock gains 1,400 over Johnston's majority in 1851. There are 26 Districts to hear from.

Lawrence Co.—In Newcastle, Pollock's majority is 200. Four townships give POLLOCK a majority of 400.

In Erie city, BIGLER's majority is 800.

BRADSHAW, Whig and Anti-Nebraska, is again elected to Congress in the Seventh District.

BIGLER's majority in Berks County is reduced to 2,300.

HENRY S. MOTT, the Democratic and Know-Nothing candidate for Canal Commissioner, has over 12,000 majority in Philadelphia alone.

In the Fifth Congressional District, JOHN CAMPBELL, Democrat, is probably elected.

PITTSBURGH, Wednesday, Oct. 11.

Returns from the Westmoreland Congressional District show Mr. Covode, Whig, over DARR, Democrat, by a heavy majority.

In Washington District, KIDDOO, Whig, beats MONTGOMERY, Democrat, 2,300 votes.

In Beaver District, ARBUCKLE, Whig, beats FAIRWELL, Democrat, 2,100 votes.

All the others are Whig votes.

In the new Allegheny Districts, Dunlap, Shower, BINGHAM and FRIDAYMOND, Whigs, are elected.

A Whig Senator is probably elected in Washington District.

In Venango District no Independent Senator and two Whig Assemblymen. Two Democratic Assemblymen are elected in Westmoreland. In Fayette there are four Whigs.

In Allegheny, one Democrat elected.

BALTIMORE, Wednesday, Oct. 11.

J. Glancy Jones has been reelected in Congress from Dubuque.

ERIE, Wednesday, Oct. 11.

BIGLER, Whig and Temperance, Democrat, have been elected in the Assembly. POLLOCK has a majority in this part of the State.

OHIO ELECTIONS.

CINCINNATI, Wednesday, Oct. 11.

The following Congressmen have been elected in this State:

First District—T. C. DAY, Whig and Anti-Nebraska. Second—J. SCOTT HARRISON, Whig. Third—Lewis D. CAMPBELL, Whig, by 3,000 majority. Fourth—BENJ. STANTON, Whig, by 5,000 majority. Tenth—SAMUEL GALLOWAY, Whig, elected over EDWIN E. CROW, Democrat, by 1,500 to 2,000 majority. Twenty-first—BINGHAM, Independent Democrat.

The Anti-Nebraska majority in Hamilton County is still down at 3,000, and the opposed Anti-Nebraska majority in Ohio, is in the neighborhood of 20,000.

Indiana and Ohio Elections.

BOSTON, Wednesday, Oct. 11.

Smith is elected in Congress in the Ninth District by 1,300 majority. Bannon in the Sixth District by 2,000 majority. Davis in the Fourth by 800; Stuart in the Second by 800; Pettit in the Eleventh by 1,500; Gartrelson in the Fourth by 300; and Henderson in the Tenth by 1,000. All are Anti-Nebraska men.

It is thought the Know-Nothing ticket is elected by a small majority in this city.

This morning we put very little doubt that Ohio has gone by a large majority for the Anti-Nebraska ticket, and that it is decidedly Anti-Nebraska.

The returns for Hamilton County show an overwhelming majority for the Nebraska ticket of 7,000.

Municipal Election in Boston.

BOSTON, Wednesday, Oct. 11.

The election in this city passed off tolerably quiet to-day.

The following are the majorities in the different Wards for Mayor, the Know-Nothing candidate for Mayor: First Ward 207, Fourth 200, Fifth 90, Sixth 96, Seventh 240, Tenth 34, Eleventh 17, Twelfth 1,100, Thirteenth 112, Fourteenth 1, Fifteenth 211, Sixteenth 324, Seventeenth 42, Eighteenth 1,414, Nineteenth 287, Twentieth 247. Thomas's majority in the First Ward was 6; in the Second 210; in the Eighth 174; in the Ninth 170; in the Eleventh 142.

The majority for Hinson is 2,745.

Bailey, the Friends of the City Council, are known and are elected beyond a doubt. Know-Nothings and the elected beyond a doubt were Democrats and eight Know-Nothings.

Municipal Election.

BALTIMORE, Wednesday, Oct. 11.

The Peoples' Ticket will be successful by an overwhelming majority. JOHN LEE, Jr., is probably elected to Congress.

FRIENDS TO FREEDOM.

The Congressional Convention of Anti-Nebraska men, held in this city yesterday, nominated Hon. WILLIAM H. JOHNSON, Whig, by a majority of 20 votes over FRANCIS THOMAS, Democrat.

Vote of Kentucky.

LOUISVILLE, Wednesday, Oct. 11.

Mr. Pennington, Whig, has been elected in Kentucky by 2,000 majority.

Vote of Maryland
